1.0 Introduction

**LAKESHORE EAST
MASTER PLAN AND DESIGN STANDARDS**

Introduction

Lakeshore East is a new mixed-use community that will be developed on Illinois Center railroad land between Lake Shore Drive on the east, Michigan Avenue on the west, Randolph Street on the south and Wacker Drive on the north. Lakeshore East, located within Illinois Center east of Columbus Drive, will include residential, hotel, office, mixed-use development and a new public park.

Development on the approximately 52 acres of land within these Illinois Center boundaries has been regulated by a number of Planned Developments approved by the City of Chicago since 1969. Illinois Center is the subject of the existing Planned Development No. 70. This Planned Development was originally approved in 1969. It was subsequently amended in 1979, and then again in 1993.

Most of the Illinois Center property west of Columbus Drive has now been developed. East of Columbus Drive, there are also a number of existing buildings, including: an office building at Three Illinois Center; the Blue Cross-Blue Shield building, the Swiss Grand Hotel and Five high rise residential buildings. In addition, west of Columbus Drive, the residential Park Millennium is currently under construction.

Lakeshore East will be created on approximately 28 acres of land that remain between Columbus Drive and Lake Shore Drive. The development of Lakeshore east will be guided by a new amendment

to Planned Development No. 70. This area is identified as Sub-Area E within Planned Development No. 70, and is currently occupied by a golf course facility and other open space located on the property east of Columbus Drive. Lakeshore East will be located within this area.

The 1993 Amendment to Planned Development No. 70 permitted approximately 14.5 million square feet to be constructed on a net developable area of 1.1 million square feet (28 acres) within Sub-Area E.

Under the new amendment to Planned Development No. 70 The Lakeshore East development will construct 9.7 million square feet of buildable area, which is approximately 2/3 of what was previously allowed. The net developable area has been reduced to under 700,000 square feet (14 acres) as a result of a significant increase in the land dedicated to the public for parks, open spaces and road rights of way.

Lakeshore East will create a new urban neighborhood including residential condominiums, apartments and townhomes, hotel, office, commercial, retail and mixed-use development and public open space including a new public park. A combined public school / park district facility is also anticipated to be included within the development.

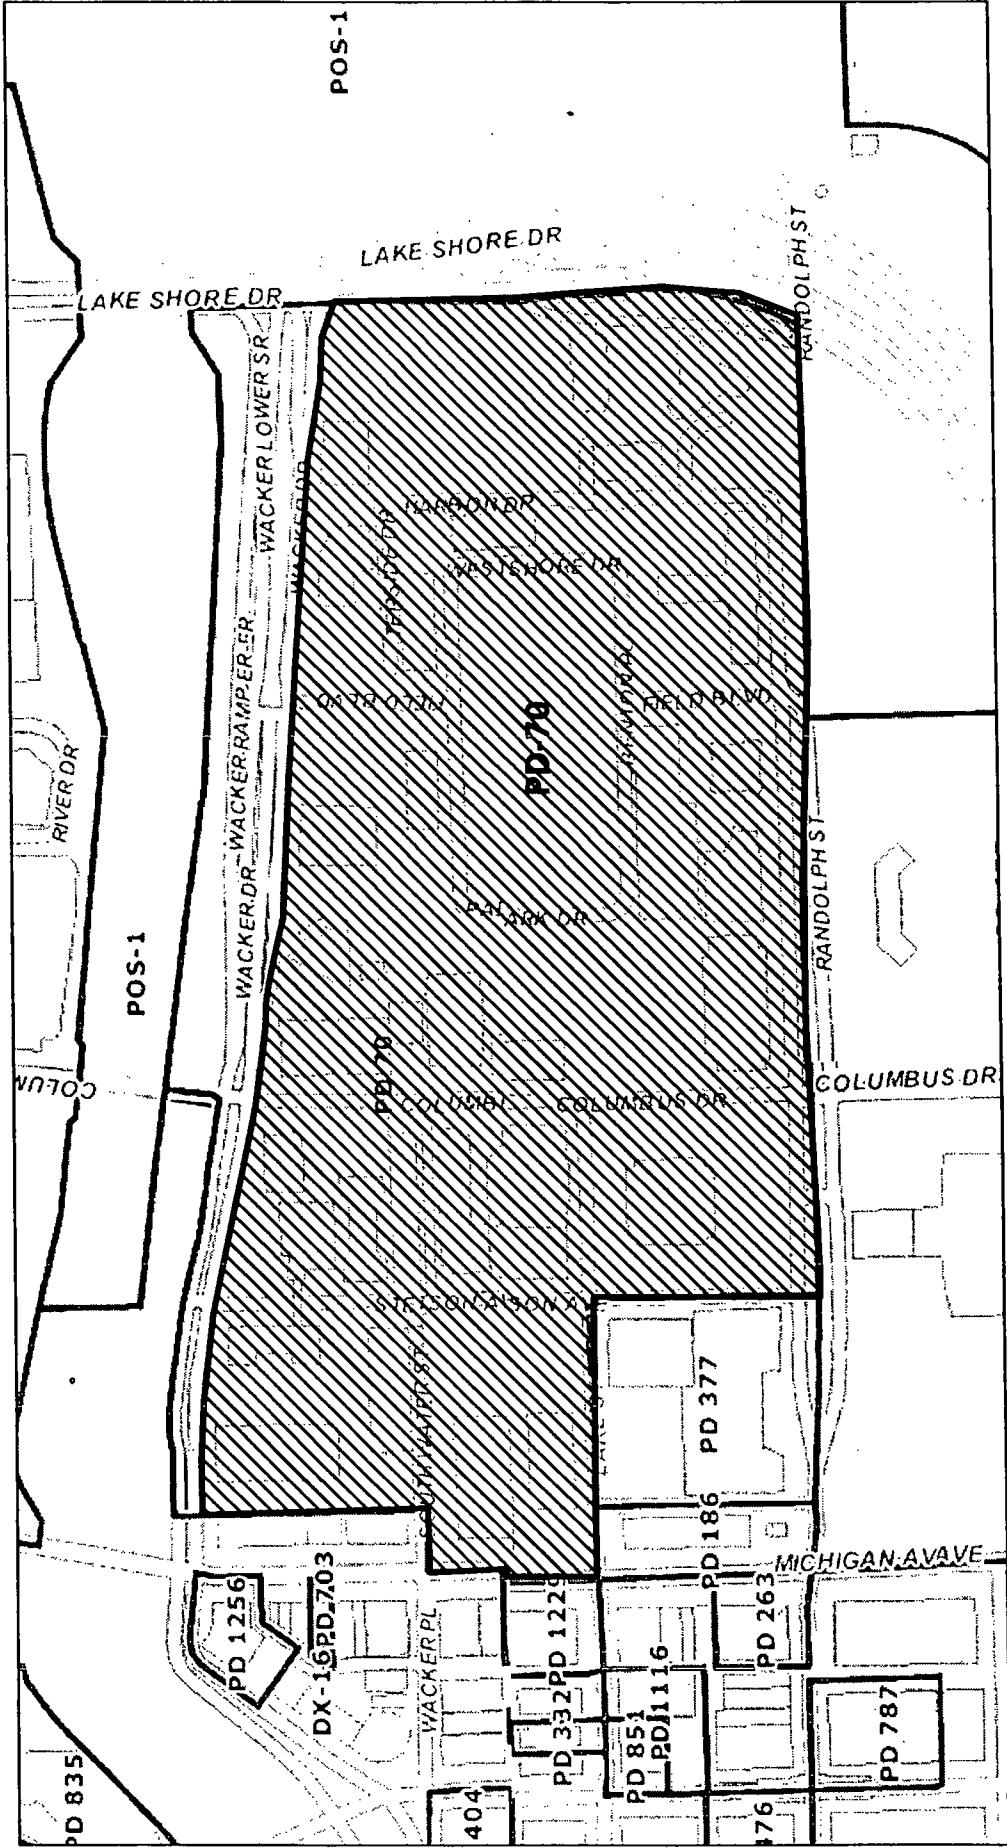

This Lakeshore East Master Plan and Design Guidelines Standards both illustrates and will guide the organization, scale, form and character of new buildings, streets and open spaces over time.

This document is intended to ensure that the future development of Lakeshore East is consistent with the vision and principles laid out in the *Lakeshore East Master Plan*.

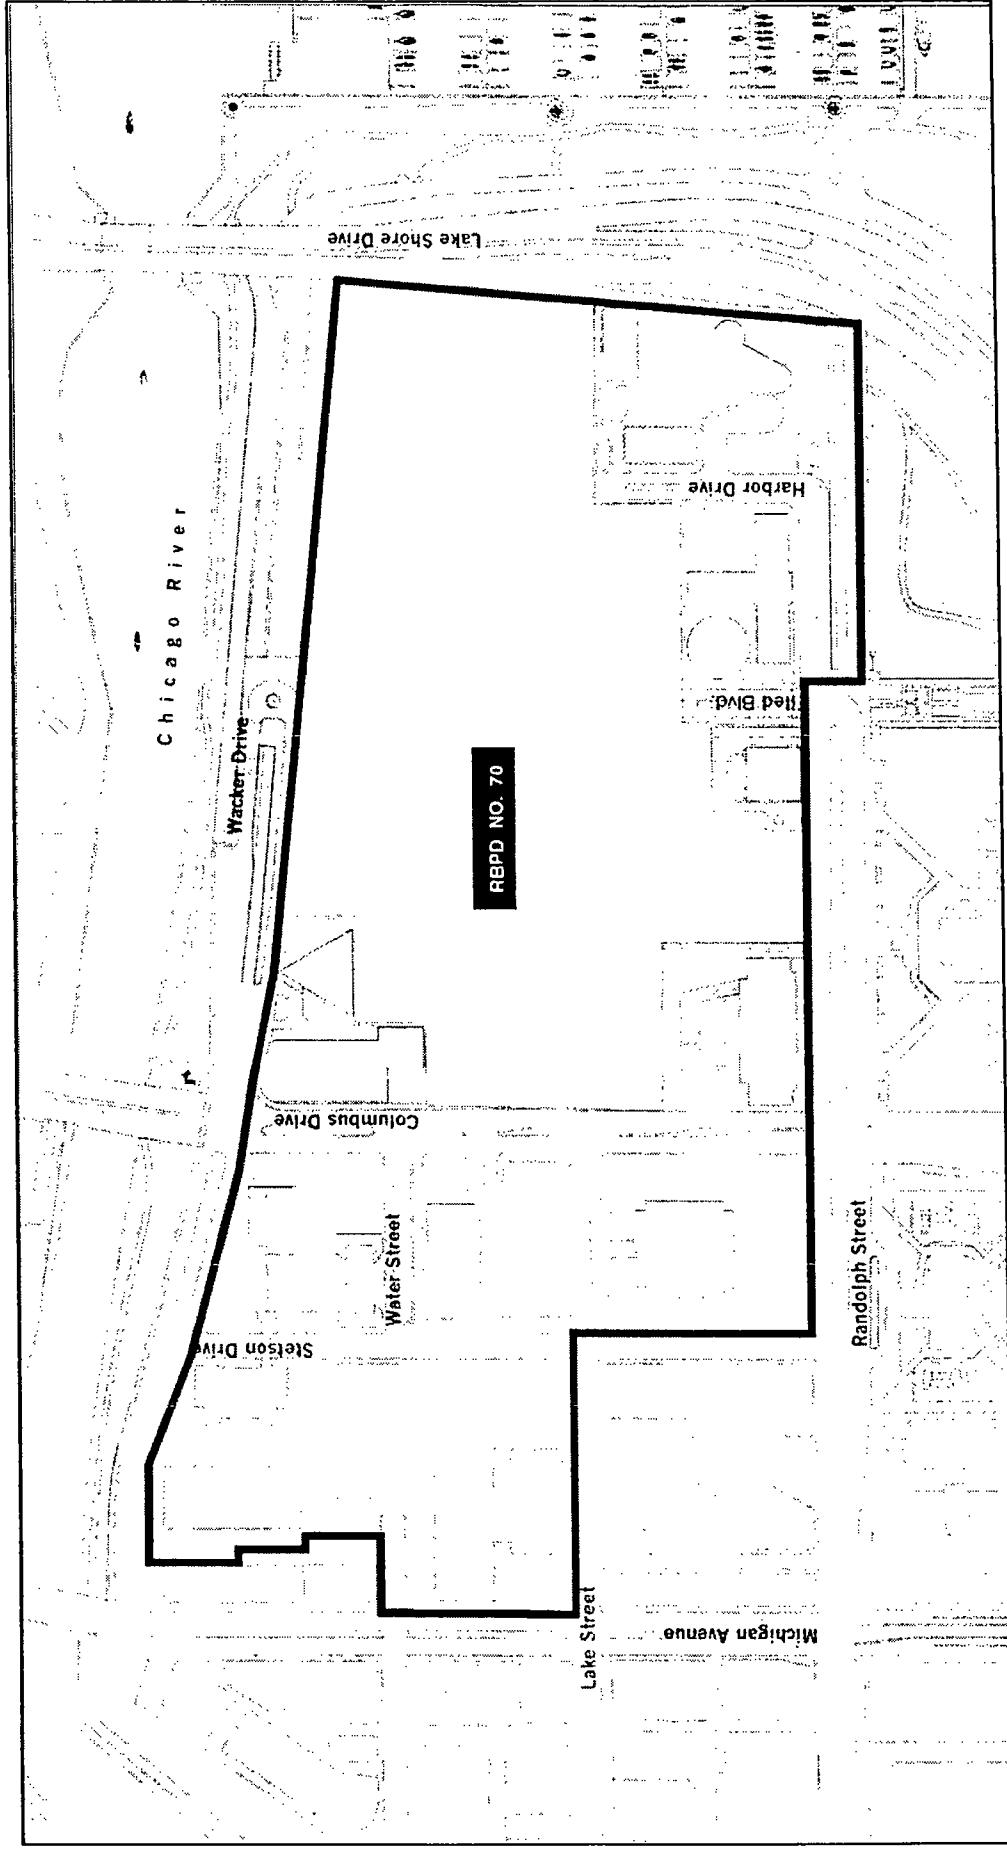

The document is organized into five sections:

- **Urban Design Principles**
Basic design principles that will guide future development
- **Development Summary**
The framework for development
- **Access and Circulation**
Connections for cars and people
- **Open Space**
Parks and courtyards to create a green neighborhood
- **Design Standards**
Guidelines that will shape the character of buildings, and the public realm

Site Context and Location

The Lakeshore East site is one of the largest remaining development parcels in the center of Chicago. Located at the mouth of the Chicago River at Lake Michigan, the site offers tremendous opportunities for new development and open space. The remarkable assets of this site include:

- Proximity to the Loop, the East Loop, the Magnificent Mile, Navy Pier, DuSable Harbor, Grant Park, the Lakefront and the Chicago River
- Spectacular views of the city and the waterfront
- Diverse uses on surrounding blocks, including offices, hotels, residential
- Proximity to transit including the METRA, CTA, Rail and the new busway to McCormick Place
- Proximity to Grant Park Parking Garages

To respond to the unique context of the site, a set of urban design principles have been developed that address the following issues:

- *The Urban Framework*
- *Building height and massing*
- *Access and Circulation*
- *Open Space*
- *View Corridors*

General Intent / Site Context and Location

The Master Plan sets forth the basic principles and controls needed to guide the development of the +/-28 acres Lakeshore East development. The Master Plan Standards will guide the development of Lakeshore East as it becomes a vibrant urban district supporting 9.7 million square feet of new residential, hotel, office and mixed use development.

It is also the intent of the Master Plan to enhance the urban fabric and character of Chicago's central area, while also achieving the goals of the City of Chicago and the developer criteria set forth for the Lakeshore East area by a 1993 Planned Development amendment.

The Master plan offers a development framework intended to ensure that as Lakeshore East evolves, it will provide a high quality of life for its residents and neighbors alike. The pattern of development blocks, streets and open spaces will connect Lakeshore East and adjacent developments and amenities. This framework will also strengthen the areas adjacent to the site, offering access to Lakeshore East's amenities and connections through this new district to other neighborhoods, the Chicago River and the lakefront.

Urban Framework

- Establish urban blocks which are similar in size to typical downtown Chicago blocks
- Create urban streets in character with those of a residential neighborhood
- Create addressing opportunities for multiple buildings per block

Subarea E
A single, contiguous development site.

Proposed development plan
Establish urban-scaled blocks and extend the local street system into the development to avoid the potential perception of a 'super-block'

Building Height and Massing

- Place tall buildings with a sensitivity towards existing residential towers
- Frame the park with low-rise development and townhouses which can screen all existing and future parking podiums from view
- Place the tallest buildings along Coumbus Drive and at key prominent locations
- Strengthen the character of the urban street wall, or facades, on Wacker Drive along the Chicago River
- "Stagger" high-rise buildings to maximize views throughout the future development

Low-rise townhouses can screen parking podiums from the street

Building massing and height should be sensitive to existing towers, street walls and view corridors

Access & Circulation

- Maximize connection to surrounding development
- Create a permeable neighborhood
- Weave the different levels together
- Strengthen pedestrian connections to the river and lakefront
- Provide convenient parking, drop-off, and service access without negatively impacting the existing streets

Diagram Legend:

The Diagram to the right represents a hierarchy of connectivity. The large arrows represent the major or primary access corridors of the site. They represent both pedestrian or vehicular traffic depending on their location. The smaller arrows indicate the secondary corridors of access.

The circles represent the major vertical connections of the site which allows the pedestrian to access the different levels of the development.

The dark dotted arrows indicate existing connections along the Riverfront, Lakefront and to Grant Park at the lower level. The light dotted arrows identify existing pedestrian movement along the major streets at the upper level.

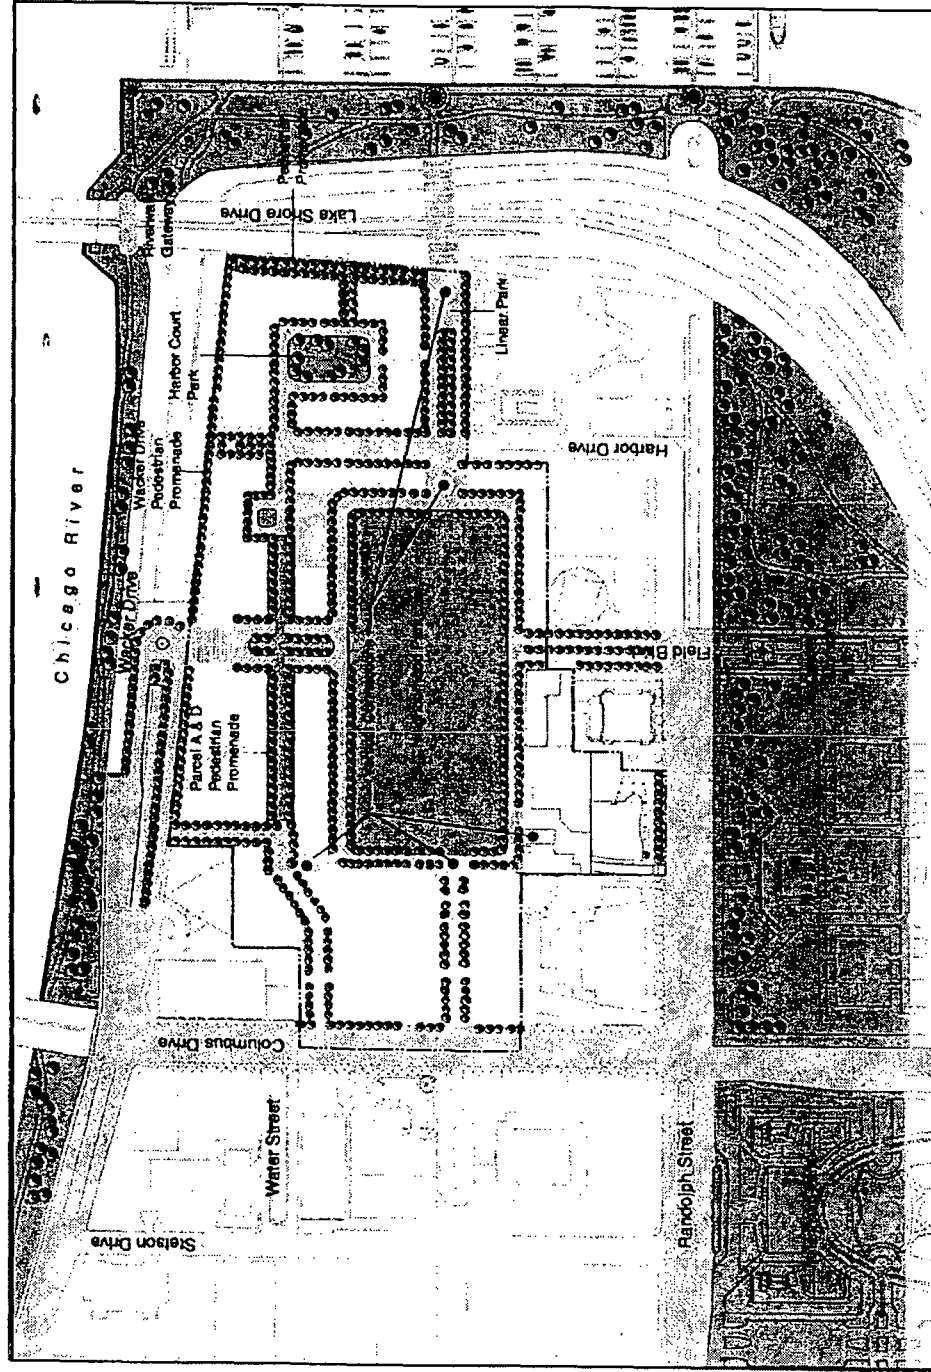

Maximize connectivity to surrounding development and create a permeable neighborhood

NOTE These plans are diagrammatic in nature and are only intended to show approximate dimensions and locations.

Open Space

- Create a large neighborhood park as the focus of Lakeshore East
- Create smaller courtyards between buildings.
- Connect the open spaces in Lakeshore East to Grant Park, the Chicago Riverwalk and the lakefront park system.
- Create well landscaped 'green' streets.

Develop a new public park, smaller courtyards between buildings and create landscaped green streets.

NOTE: These plans are diagrammatic in nature, and are only intended to show approximate dimensions and locations.

November 19, 2015

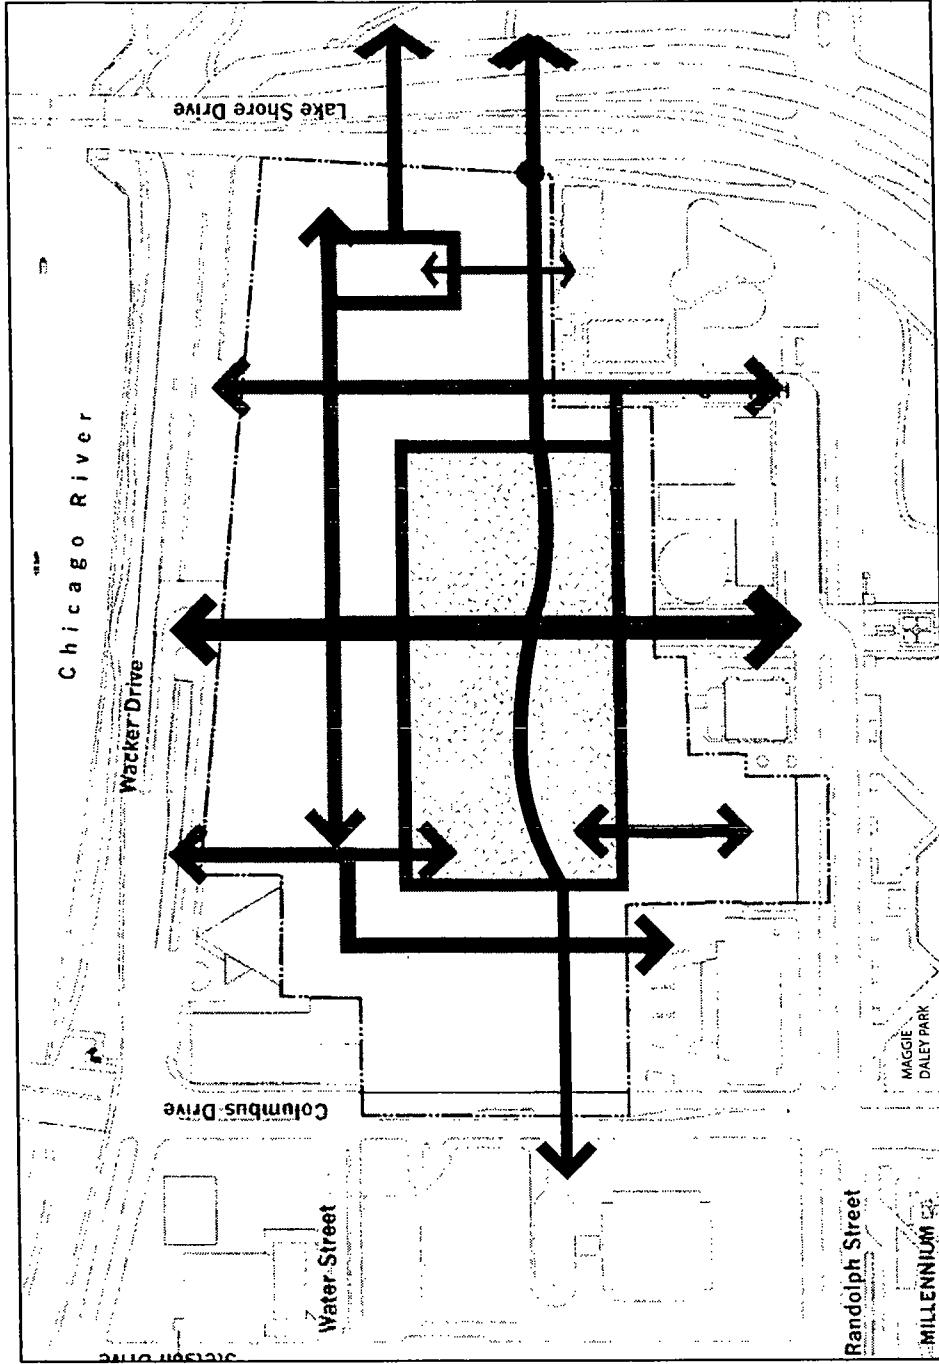

View Corridors

- Ensure a visually permeable neighborhood
- Create east / west and north / south view corridors
- Maximize views from existing residences
- Place tall buildings at the northern edge of Lakeshore East
- Maximize views to the central park
- Create appropriate building separation to allow for views through the development

Diagram Legend:

The large arrows and thicker lines represent the major view corridors of the site

The smaller arrows represent the secondary view corridors of the site.

NOTE: These plans are diagrammatic in nature and are only intended to show approximate dimensions and locations.

Introduction

The master plan for Lakeshore East establishes a framework of 7 development parcels. These development parcels are defined by a network of addressing streets at various levels. Parcel dimensions have been established that will allow for flexibility in accepting a variety of land uses and building types.

The intent of the master plan is to develop a new, vibrant urban district that promotes a collective image for Lakeshore East. This may be achieved through a consensus that is based on the following principles:

Land Use

- New development should be compatible with neighboring uses
- Locate Office uses at the western portion of the site, adjacent to existing office buildings, office could locate along Wacker Drive limited by the location of the upper level roadway of Wacker Drive
- Locate residential uses adjacent to and within views of the neighborhood park, Chicago River, and / or Lake Michigan
- Provide a future school site within the park

Parcelization

- Ensure the creation of an urban framework of streets and blocks
- Allow for future development flexibility

Development Plan

- Locate taller buildings with a sensitivity towards existing view corridors from neighboring buildings
- Frame the neighborhood park with townhomes or low-rise development with taller buildings beyond.

Parking

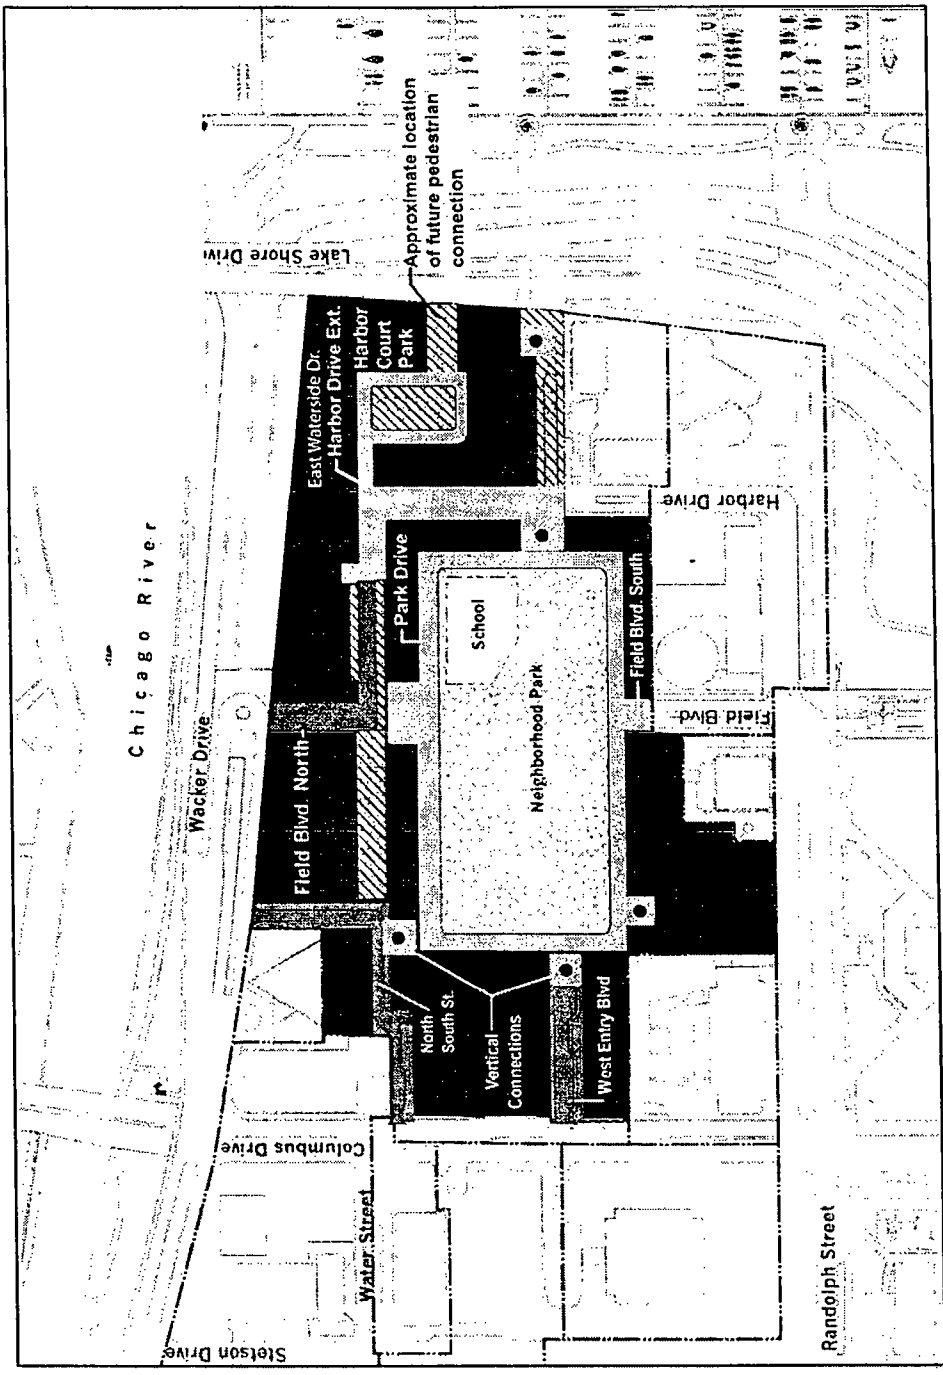

- Maximize on-street parking
- Screen all structured parking from view
- Develop below grade parking lined with townhomes which front onto the park

4.0 Access and Circulation

- Vehicular Access and Rights-of-Way
- Automobile Entrance Zones / Parking Access
- Pedestrian Access
- Right of Way Criteria

Introduction

The family of streets identified within this master plan establishes an identity and character for this neighborhood. These street types address the complexities of the site and the different levels, while emphasizing the pedestrian character of the development. The framework of streets and sidewalks has been designed to provide separate vehicular and pedestrian paths, while ensuring an active and energetic street environment. Pedestrian safety and easy access between the different levels must also be ensured throughout the plan. Gracious sidewalk widths, ground level activities and distinctive landscape treatments will create a strong pedestrian environment for the neighborhood.

Each of the streets has been designed to serve equally as an open space amenity and a vehicular travel zone. The local streets lead to and link the new public park to each major block. This concept is strengthened by the provision for interior courtyards and other public spaces that directly link to the main pedestrian paths.

The following street types and sections respond to the anticipated levels of vehicular traffic within the neighborhood. They also establish a connected network of intimately-scaled, pedestrian oriented streets. These guidelines address the following principles:

Streets

- Create well-scaled, tree-lined streets which strengthen the pedestrian environment
- Extend Harbor Drive north in order to complete the local residential street system
- Ramp Field Drive down from upper Randolph Street and connect it to a new Park Drive ringing the park at the natural grade level
- Provide a new internal street at the upper level to provide multiple access and address points for the western parcels

Parking Access

- Provide convenient access from the upper, intermediate, and lower levels
- Locate parking access mainly within interior courts or side streets

Service Access

- Locate service access at the lower level
- Utilize utility easements for service access

Pedestrian Access:

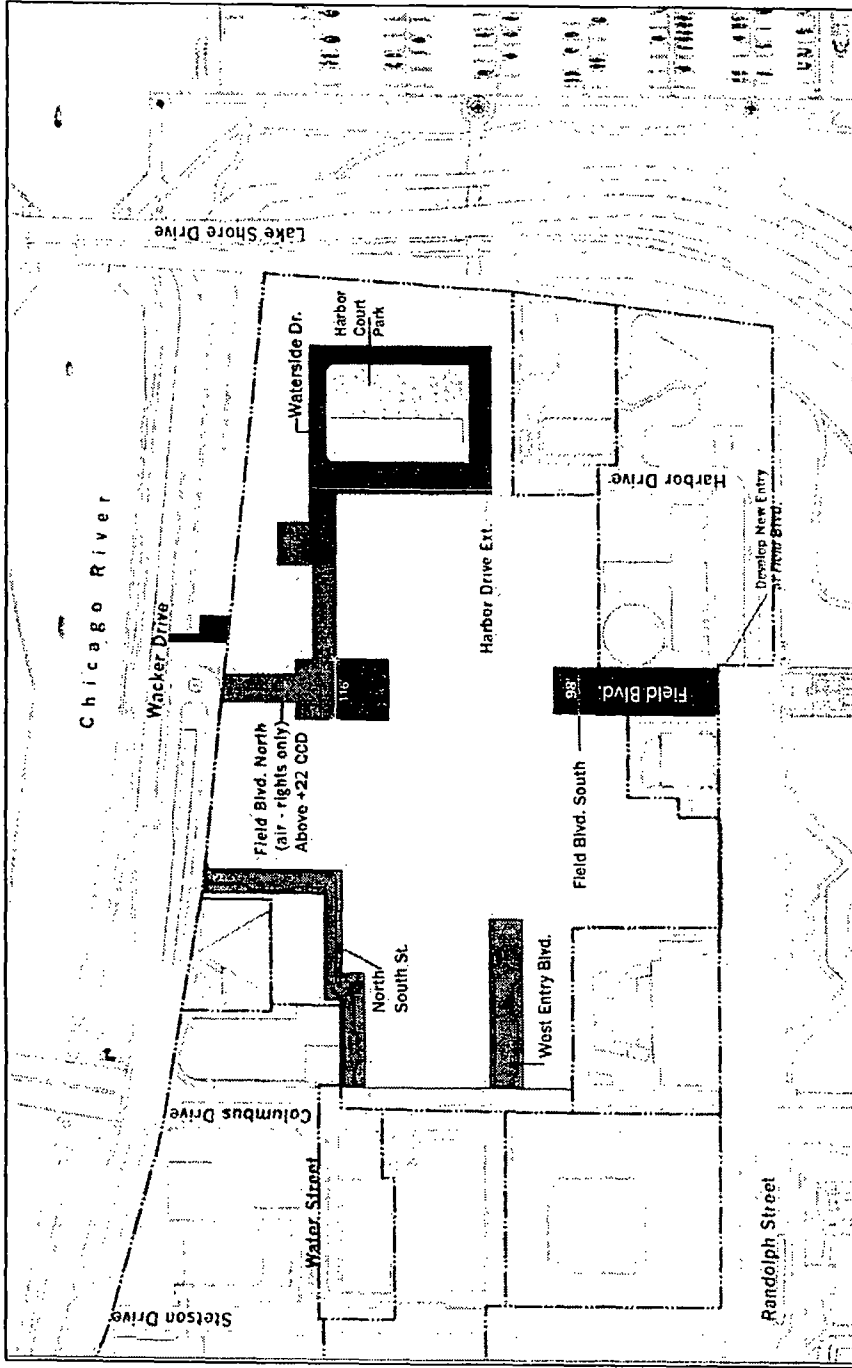

- Provide clear pedestrian links to the Chicago River and Lake Michigan
- Provide convenient access between the upper and lower levels
- Provide handicap access throughout the development
- Extend and connect the Pedway to the park

Emergency Access Easements

- Emergency Access easements will meet all Chicago Fire Department requirements

R.O.W. Adjustments - Upper Level

- The upper level is intended to serve local neighborhood traffic only
- Access to the Park Drive occurs from a connection to Upper Randolph via a sloped Field Boulevard.

- New R.O.W. to be Dedicated
- Existing Dedicated R.O.W. to Remain
- Public Street Not Dedicated

Note: Refer to Street Criteria Drawings for new R.O.W. dimensions & criteria

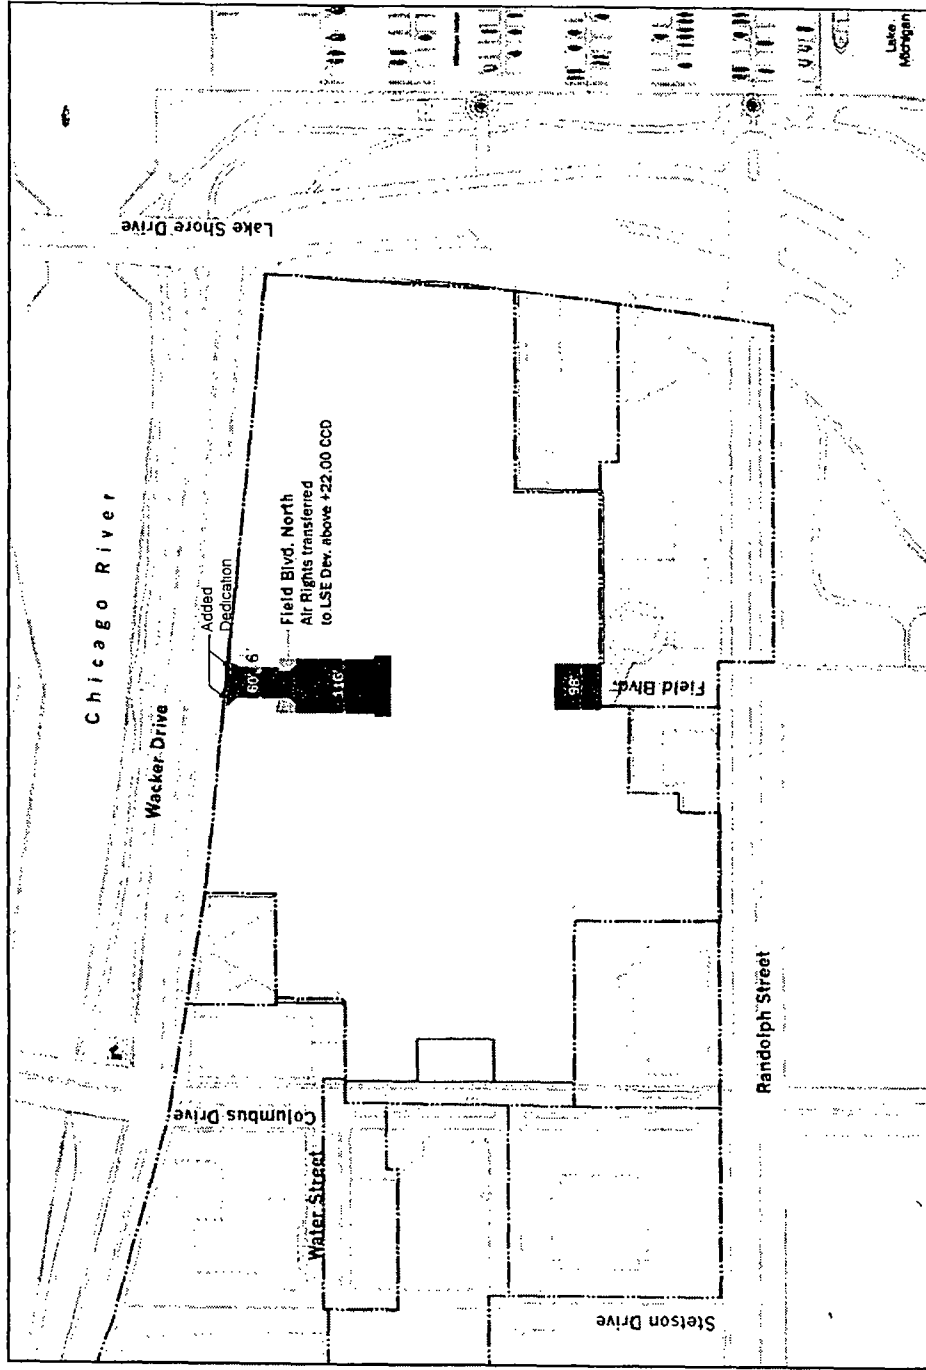

NOTE:

1. Various Non-Roadway Portions of Upper Level Right of Ways may contain ventilation grates and structures in order to accommodate Lower Level Uses (e.g., parking garages, public, quasi-public and private utilities, etc.)
2. These plans are diagrammatic in nature. The precise location and dimensions of future roadways will be subject to the approval of the city. The vacation and dedications will be accomplished through separate ordinances.

R.O.W. Adjustments - Intermediate Level

- No new roadway connections to Wacker Drive or Randolph St. are proposed at this level, in order to minimize thru-traffic.

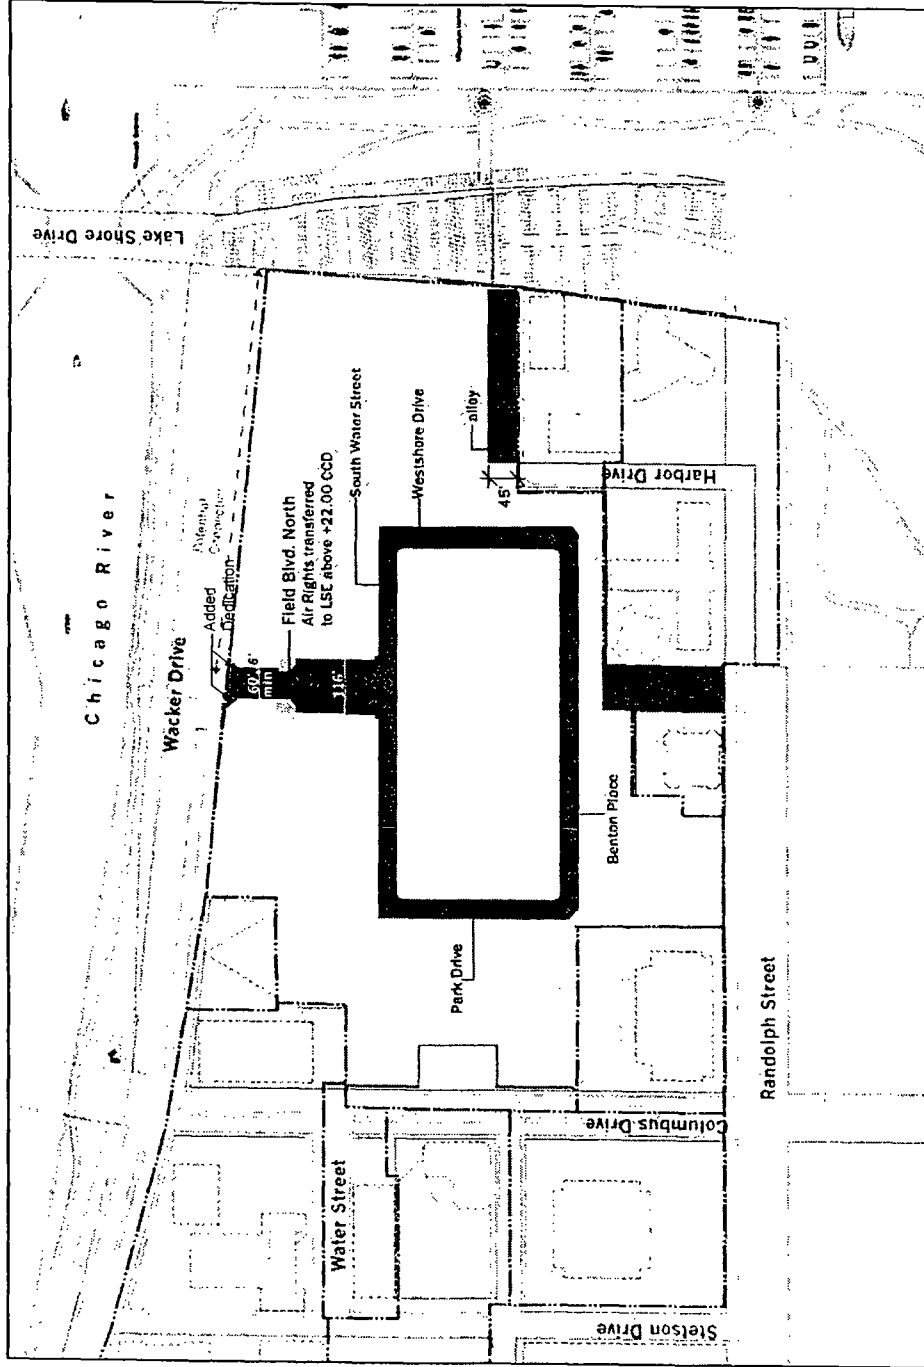

R.O.W. to be Vacated New R.O.W. to be Dedicated Existing Dedicated R.O.W. to Remain

Note: Refer to Street Criteria Drawings for new R.O.W. dimensions & criteria

NOTE: These plans are diagrammatic in nature. The precise location and dimensions of future roadways will be subject to the approval of the city. The vacation and dedications will be accomplished through separate ordinances.

R.O.W. Adjustments - Lower Level

- The Park Drive will ring the neighborhood park with one way through traffic at the lower level
- A connection to Lower Wacker Drive via Field Drive North will allow a second means of access / egress to the lower level

R.O.W. to be vacated

New R.O.W. to be Dedicated

Existing Dedicated R.O.W. to Remain

Note. Refer to Street Criteria Drawings for new R.O.W. dimensions & criteria

Automobile Drop-Off Zones.

- Automobile Drop-off zones at building entries should be conveniently located, yet discreet.
- Curb-side drop-off zones are preferred. Large vehicular turn-around interrupting pedestrian sidewalks should be avoided

Parking Entries

- Entries to parking garages should be incorporated & integrated into the facade of a building.
- Large uncovered ramps within the sidewalk zone or open spaces should be avoided.
- Where parking access traverses a pedestrian access, the paving material should be consistent w/ the adjacent pedestrian sidewalk paving.

■ Allowed automobile entrance zones

* Drop Off Zones

Pedestrian Walkway System - Upper Level

Connections to Grant Park

- Pedestrian Connections will exist on the upper level connecting to existing Grant Park Features such as the Daley Bicentennial Garage; Cancer Survivor's Park; and Millennium Gardens. These connections will adhere to the guidelines of both The City of Chicago Landscape Ordinance, and also those provided by the Chicago Park District.

Vertical Connections

- Vertical connections will also be provided, and will be handicap accessible.
- Private developable spaces may be integrated in and around the vertical connections, as long as public access is maintained to the elevators and/or stairs.

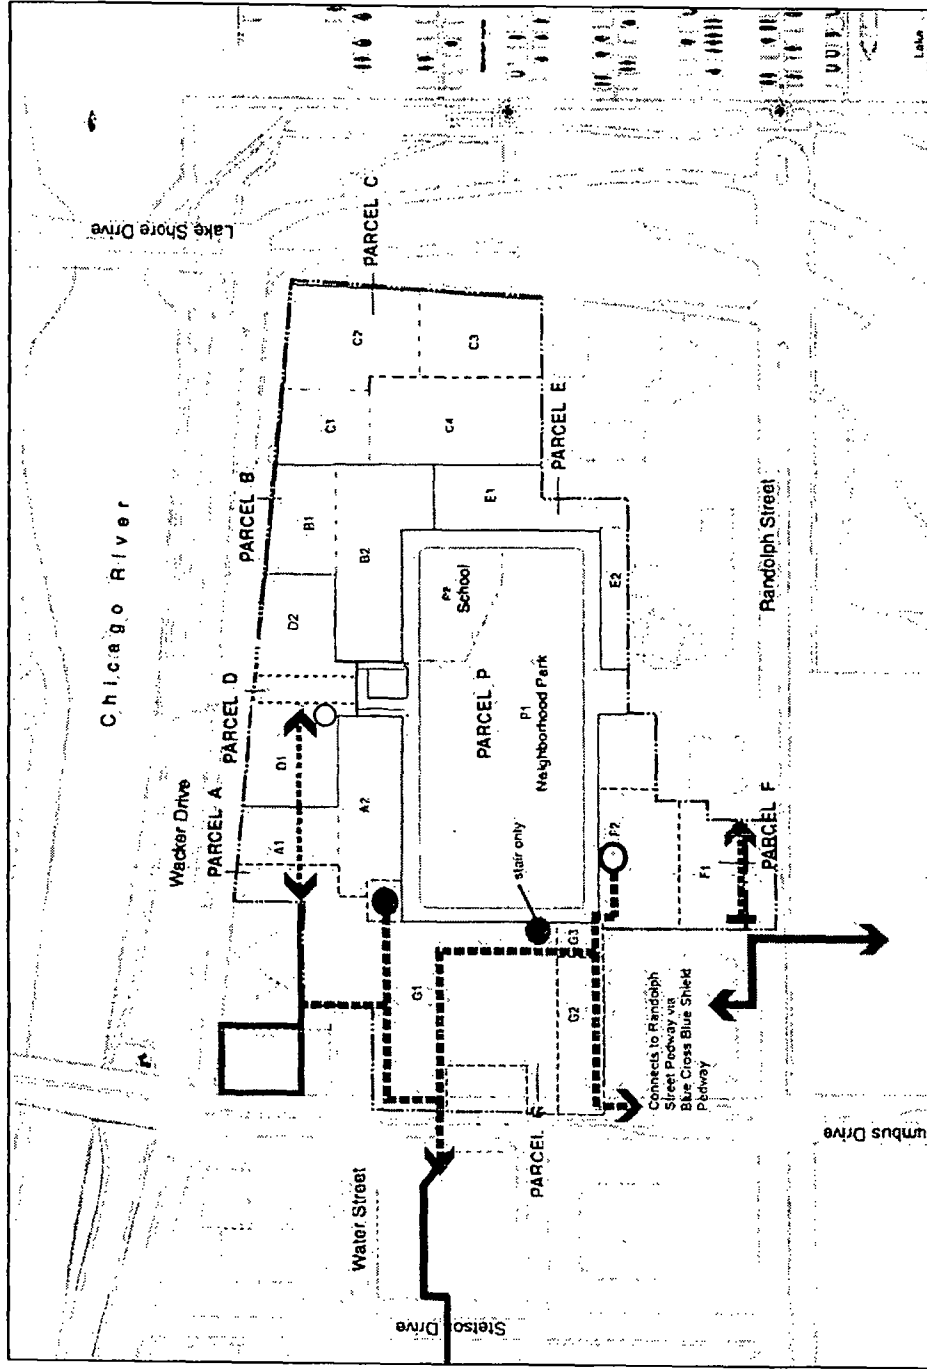

NOTE: These plans are diagrammatic in nature and they indicate the approximate location and the intent of the vertical connection, not the precise locations.

Pedestrian Walkway System - The Pedway System

Connections to existing pedway system

- Within Subarea E, connections to the existing pedway system will be provided to sub-parcels A1, D1, F1, G1 and G2, as shown on the adjacent diagram. In general, the new connections maintain or exceed minimum requirements, and provide a minimum / maximum of 8'-25' walkway widths.
- Within other subarea, potential connections could feed into those proposed for Subarea E.

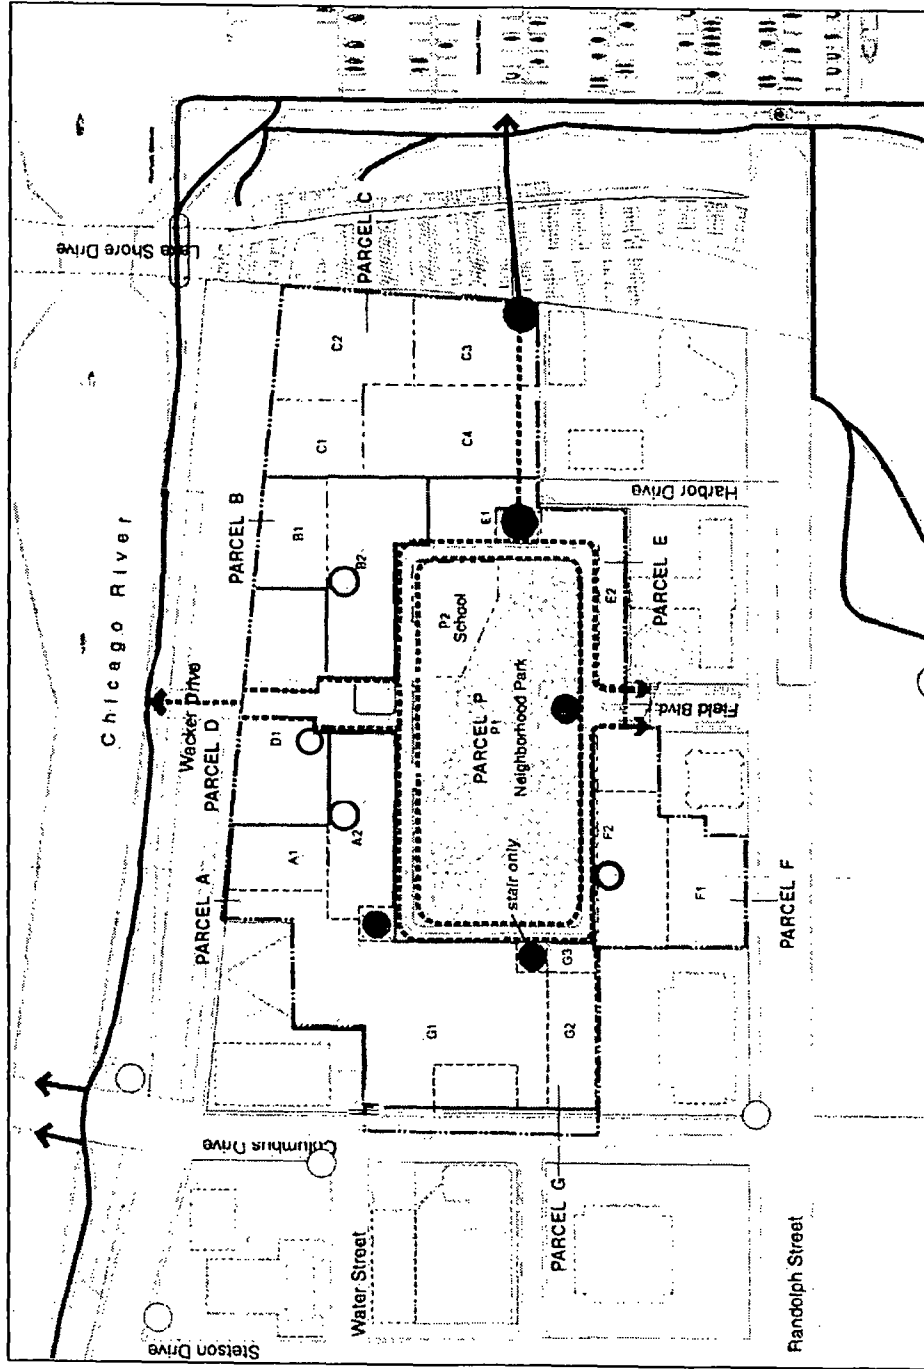

NOTE: This plan is diagrammatic in nature and is intended to show which parcels / sub-parcels should be connected to the parkway system, not the actual route for the connections.

Pedestrian Walkway System - Lower Level

Connections to the River and Lakefront

- Pedestrian Connections will be provided to both the lakefront and river at the lower level. These connections will be coordinated with The Chicago Park District.
- The character of the connections to the river and lakefront should be pedestrian friendly. Ornamental pedestrian fixtures should be provided. Adequate lighting levels for safety should also be provided. A safe marked zone for pedestrians should be created.
- Parking and sound should be screened from view of these pedestrian corridors to the greatest extent possible.
- Long large walls at the proposed underground pedestrian connection to the Lake and River should provide openings to active spaces when possible or be well-lit with articulated architectural details and potentially public art displays such as the existing Riverwalk Gateway at the southwest corner of the River and the Lake.

NOTE: This plan is diagrammatic in nature and is intended to show which parcels / sub-parcels should be connected to the parkway system, not the actual route for the connections.

VERTICAL CONNECTIONS: Private Developable spaces may be integrated in and around the vertical connections, as long as public access is maintained to the elevators and/or stairs.

FIELD BLVD. NORTH

Field Blvd. North serves as a major entry into the new development from the north. Field Blvd. shall be a divided boulevard oriented north and south, connecting to the Park Drive. It will feature a consistent and attractive streetscape to include canopy trees, street lighting and pedestrian walk (per City ordinance). These walks will serve as the primary link for pedestrians walking to Park and the Chicago Riverwalk.

Introduction

The open space of Lakeshore East is defined by a series of green spaces including a large urban neighborhood park. The neighborhood park area will be approximately 6 acres in its size. Overall the Lakeshore East site will contain approximately 12 acres of publicly accessible open space which includes courtyards, pedestrian promenades, and landscaped setbacks.

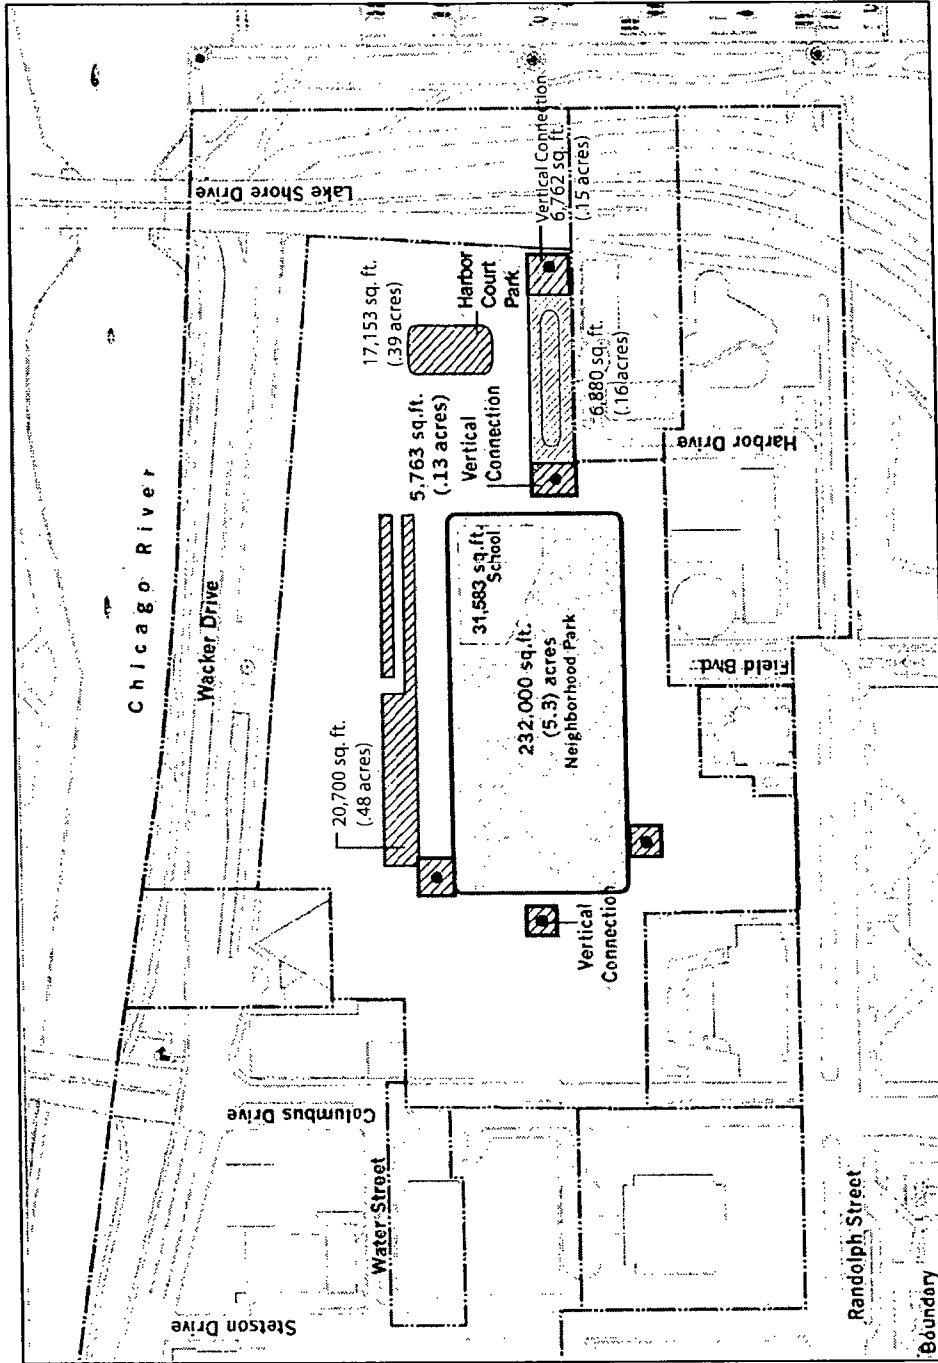

Connections to the river and the lakefront will be provided as links to the great open space of the city. A strong connection to Grant Park via Field Blvd. will also be provided

The neighborhood character of the park will be an amenity for both future and existing residents. It will essentially be located at the lower level on grade creating a neighborhood open space where trees and landscaping can flourish.

In conjunction with the neighborhood park there will be courtyards, and open space buffers which will enhance and link the surrounding open space amenities. Interior green spaces or courtyards will serve as open space amenities for both new and existing residents.

Roof top gardens are strongly encouraged to be created on various buildings. These gardens will provide a landscaped aesthetic while also enhancing the environmental aspects of the buildings.

Linear pedestrian promenades will be landscaped with trees, flowering planters and paved sidewalks. These pedestrian streets will act as promenades that connect the east and west edges of the site, but will also provide emergency vehicular access to future developments.

	Public Space to be dedicated		Vertical Connection	Total Public Park:	232,000 sq. ft.
	Public Space not dedicated		Public Space	Land Area:	5.3 acres
				Total School:	31,593 sq. ft.
				Land Area:	.73 acres

NOTE: These plans are diagrammatic in nature and they indicate the approximate location and intent of the school location, the spaces to be dedicated as public parks and the vertical connections, but not the precise locations.

The amount of space dedicated as public park is subject to acceptance by the Chicago Park District.

NOTE. These plans are diagrammatic in nature and they indicate the approximate location and the intent of the vertical connection, not the precise locations.

NEIGHBORHOOD PARK

Preliminary Conceptual Design

A large public park ("the Neighborhood Park") shall be designed and constructed to encourage public use. The Neighborhood Park is intended to function as a public space for outdoor events and provides a gathering space for the surrounding office, hotel and residential neighborhood.

Neighborhood Park Scale & Character

The park should generally function as a passive neighborhood open space. Large permanent active athletic uses, with the exception of the multi purpose open space in the center of the park, should be avoided. The park should be designed and scaled appropriately for neighborhood use as opposed to a regional attraction.

Park Perimeter / Entries

The perimeter of the Neighborhood Park shall be designed to define the park as a public space and will offer sidewalks, seat furniture, lighting and terraces for gathering. A wide landscaped parkway planted with large canopy trees and a continuous 6' wide pedestrian sidewalk should complete the Park Drive streetscape and define the edge of the park.

Access to the park shall be directed to and controlled at key locations through the use of identifiable entry areas. An entry overlook terrace shall be created at the south end of the park near the Field Blvd. intersection to provide a panoramic view of the park. A public stairway and handicap accessible ramp shall be provided at this location.

The eastern and western entries to the park shall be aligned with the vertical connections in parcels E and G.

Pedestrian crosswalks along the Park Drive should be coordinated with these entries and the flow of traffic.

Park Programming Zones

- The park shall include a centrally located, large, gently sloping open green space to be used for both active and passive uses
- A secured play area shall be provided adjacent to the future school, and offer a variety of play opportunities for several age groups. The play area should also be located adjacent to the open green. The approved park design shall be completed within the first phase of development. The playground shall be placed within the park in a location where it will not be impacted by future school construction.
- A centrally located dog park may be provided. The inclusion of a dog park will alleviate the requirement to install individual dog runs/facilities in the individual residential buildings.
- A future school zone at the northeast corner of the park shall be designated. Prior to construction of the school, this area shall be designed and built to similar open space standards as the rest of the park for interim open space use. The future school will share space for Chicago Park District facilities.

Topography

The park shall generally slope from el.+6.00 CCD on the north up to el. +30-00 CCD to the south. The park topography should transition smoothly to the various sloped roadways at the perimeter of the park. Large retaining walls at the perimeter of the park more than 3' high should be avoided.

The Office of James Burnett

PRELIMINARY LANDSCAPE GUIDELINES

The design of the park will be coordinated with the City of Chicago, The Chicago Park District, and the community. The following preliminary landscape guidelines indicate minimum standards for landscape materials.

The design and quality of Landscape Materials within all publicly accessible neighborhood open space areas must be executed with these same minimum standards.

Paving

The location of sidewalks and their particular treatment will be determined by the intended use and the overall nature of pedestrian spaces. Park pathways shall be ADA accessible. Typical sidewalks shall use more basic materials such as concrete. Areas such as the linear promenades, entry ways for residential townhomes/towers, and other special pedestrian walkways could utilize higher quality materials.

Paving materials for pedestrian paths may include, yet are not limited to, the following concrete, colored concrete, concrete unit pavers, brick, stone pavers, decomposed granite.

Landscapeing

The landscape is intended to enhance the site by providing flourishing species of diverse vegetation, while also promoting the use of indigenous plant materials. Ornamental planting should be used for local points, small courts or special areas within the park.

The planting specifications for new landscaping should be consistent with the City of Chicago Landscape Ordinance. The following is a brief summary of some additional guidelines for plantings:

Lawn Areas

Active and passive lawn areas will incorporate sod. Ornamental prairie grass or meadows may be used as ornamental beds.

Existing Trees

To the greatest extent possible, the existing trees designated as desirable species shall be protected, maintained and/or relocated into the neighborhood park or other future open space areas.

New Trees

The following minimum guidelines for tree sizes (at time of installation) shall be followed

- 1) Minimum root ball sizes for trees:
shall conform to ANLA Standards
- 2) Specimen tree size:
a) Minimum caliper : 6 inches
b) Height range : 20' to 30' feet
- 3) Shade tree size
a) Minimum caliper : 3 1/2 -4 inches
b) Height range : 18' 10' 25' feet
- 4) Small upright/ornamental tree size:
a) Minimum caliper : 2 7/2 inches
b) Height range : 6' 10' 12' feet

Shrubs and Other Plantings

These minimum guidelines for the following miscellaneous plant types shall be followed

- 1) Shrubs:
a) Minimum container size 5 gallon
b) Height range : 1 1/2 to 3 feet minimum

2) Vines, trailing ground cover or trailing perennials:

- a) Minimum container size: 1 gallon.
 - b) Minimum number of runners 4.
 - c) 8 inches minimum length of runners.
- 3) Clump ground covers or clump perennials
a) Minimum container size 1/2 gallon
b) crown and roots shall be well developed within container
- 4) Annuals
a) Minimum container size: 2-1/2 inch pots
b) Height range varies with annual type
c) Full crown with healthy, vigorous flowers

Landscape Irrigation System

A landscape irrigation system will be provided in all necessary areas for the general maintenance, and up keep of vegetation.

Water Features

If water features are to be created in the park, they should be compatible with their setting. For example, smaller, more intimate fountains may help to create a serene space. Larger, more active and participatory fountains can help to draw large gatherings of people and provide a focal point for a larger setting.

The technical design of a potential water feature should incorporate the necessary equipment (i.e. filter, pumps, nozzles, etc.) required for efficient use and desired aesthetic effect. Public safety, wintertime use, and maintenance should also be carefully considered in the design of water features in the park.

Fences

If utilized, fencing in the park shall provide for safety only. Fencing should not hinder public access through the site.

Fencing should be ornamental in its nature in order to enhance the overall aesthetic setting of the park. High quality materials such as ornamental metal, black in color, should be used for fencing. Fencing shall be limited to a maximum height of 48".

Playground Equipment

Playground equipment will be furnished with the latest materials and safety surface to ensure both durability and safety. The equipment should be designed to accommodate a variety of users and age ranges. Playground equipment shall meet ADA requirements

Park Furnishings

Site furnishings will be supplied where applicable. Furnishings may utilize a number of materials which could include steel, stone, wood, etc..

The design and selection of the Neighborhood Park furnishings including, but not limited to, lighting, benches, bike racks, and trash receptacles shall be coordinated and approved by the City of Chicago and The Chicago Park District.

Structures

Structures within the park setting should be simple, small in scale and in character with the park setting. Small structures such as arbors, pergolas, gazebos, may help to enhance the pedestrian realm and provide shade, a place to rest and create a sense of place.

Park Lighting

Park lighting shall be provided and should incorporate pedestrian friendly ornamental fixtures placed along the park paths. The fixtures shall be spaced at a comfortable distance in order to provide adequate lighting for safety at night.

PARCEL C PARK

The Parcel C Park shall be an open space centrally located within the future residential area on the east side of the development. Encircled by the Harbor Court drop off, safe and convenient pedestrian access shall be provided from all Parcel C buildings to the internal park.

The park should feature a common green to be used for both active and passive uses. The park should provide walking paths, special paving, seating, and lighting in addition to special ornamental planting. A small children's playground could also be provided in this open space.

PARCEL C LINEAR PARK

The Linear Park connects pedestrians from the extension of Harbor Drive to the lake/rom. This space also provides automobile and emergency access to the two southern residential buildings in Parcel C.

This linear green space shall be designed to create a pedestrian friendly environment. The sidewalks shall be designed with canopy trees, special plantings, lighting, and special paving surfaces. The median should be planted with canopy trees, shrubs, ground cover, and perennials.

An interim driveway/drop off may be provided (if required) for access for buildings on Parcel C3 and C4. Once the entire Parcel C development is completed, and the internal Harbor Court drop off is operating, this space shall be converted into permanent open space. However, emergency vehicular access through this space, connected to Harbor Court, must be maintained.

At the eastern edge of this space, a stairway and elevator shall be provided for pedestrians to connect to the existing walkway under Lake Shore Drive, connecting Lakeshore East to the lakefront and DuSable Harbor. (See page 5 10 for further standards for this vertical connection)

PARCEL C LAKESHORE DRIVE PROMENADE

This linear green space shall be designed to provide a publicly accessible pedestrian promenade along the eastern edge of the development. This 40' wide (minimum) promenade shall be designed with canopy trees, special plantings, lighting, and special paving surfaces.

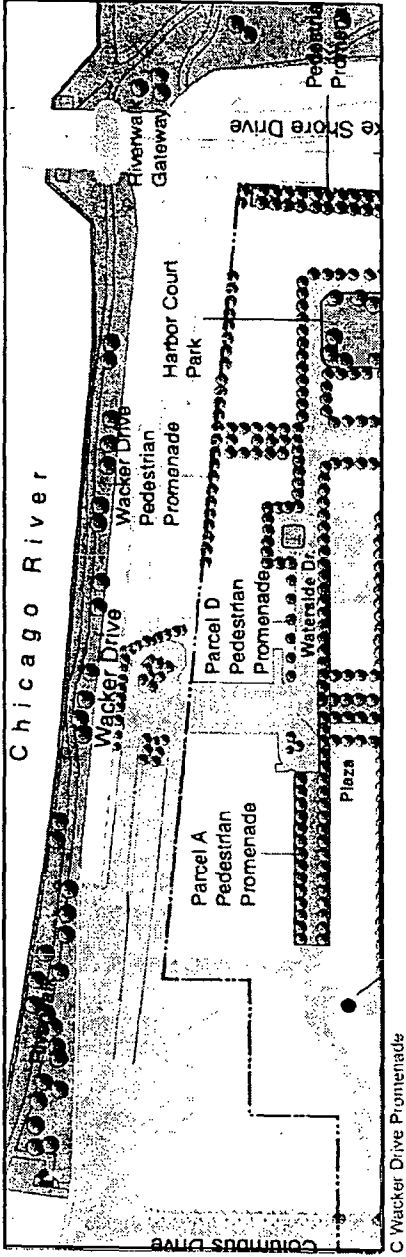

Special consideration must be given to its relationship to Lake Shore Drive. Its location may be at or above the elevation of Lake Shore Drive. Parking podiums must be screened from view through the use of architectural or landscaped elements.

PARCEL B & C WACKER DRIVE PROMENADE

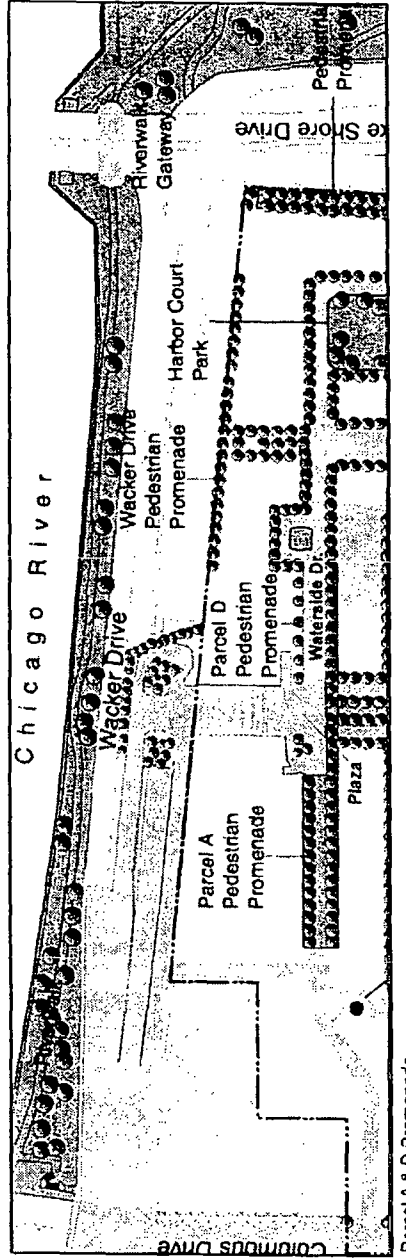

This linear green space shall be designed to provide a publicly accessible pedestrian promenade along the northern edge of the development at the upper level. This 20' wide (minimum) walkway shall be designed with canopy trees, special plantings, lighting, and special paving surfaces.

Opportunities for sidewalk cafes and terrace overlooks should be encouraged and integrated into the promenade design.

PARCEL A & D PROMENADE

A linear green space shall be designed to provide a publicly accessible pedestrian promenade between the buildings fronting Upper Wacker Drive & the Park Drive. This promenade shall lead to a plaza spanning Field Blvd. North. Both the promenade & the plaza shall provide an important secondary east west connection at the upper level through the future development. The pedestrian walk shall be designed to accommodate emergency vehicular access.

NOTE: These plans are diagrammatic in nature and are only intended to show approximate dimensions and locations.

VERTICAL CONNECTIONS

A minimum of 4 vertical connections shall be created to connect upper level development with the park ring roads. As previously mentioned, one additional connection must be included in Parcel C along Lake Shore Drive. These connections must include stairways and elevators as is feasible.

Placed at each edge of the Neighborhood Park, these connections will ensure views into the park from the surrounding areas. These connections must provide attractive and convenient pedestrian friendly access between the upper and lower levels of the district. The design of the stairways shall complement the Neighborhood Park and architectural design through the use of special paving, lighting, hand rails and planters. These connections shall be treated as landscape features incorporating plantings to help soften this connection between levels.

NOTE: These plans are diagrammatic in nature and they indicate the approximate location and the intent of the vertical connection, not the precise locations.

6.0 Design Standards

- Introduction
- Development Review Process
- Controls for Development
- Parcel Design Criteria
- Building Design Criteria
- Building Materials
- Environmental Considerations

Introduction

The Design Standards included as part of the Lakeshore East Planned Development submittal are intended to ensure that the basic Lakeshore East Master Plan concepts are realized. These Master Plan Concepts include:

- Create urban street walls that support a diverse pedestrian experience.
- Create an enhanced pedestrian environment that physically and visually connects activities within existing and future buildings to adjacent public areas.
- Preserve views from existing development through new development to the greatest extent possible. Establish view corridors for new development.
- Create a distinctive skyline

The following standards describe specific design intentions which should be used by the designers, developers and city agencies involved in the building of Lakeshore East.

Development Review Process

The Design Standards are intended to establish a self-policing structure for evaluation of projects which shall be submitted to the Department of Planning and Development for approval, prior to submission to the City for building permit.

The developer shall establish a Lakeshore East Design Review Committee for internal review of all development proposals for conformance with the Master Plan. All design submissions should include detailed site plans, building plans, elevations, material samples, and information on lighting and signage. The Design Review Committee may also request additional project information including models or three dimensional renderings.

Any modifications to the Master Plan or Design Standards will require discussion with the City of Chicago Department of Planning and Development and a consensus that the changes do not negatively impact the intent of the Master Plan. Any modifications deemed significant will require an update to the Master Plan & Partial PD Amendment.

Controls for Development

The Lakeshore East Master Plan establishes seven development parcels organized around a neighborhood park. The parcels have been defined to accommodate the projected long term build-out. The parcels have also been divided into sub-parcels to permit flexibility in responding to specific development proposals. The sub-parcel divisions may adjust slightly in order to accommodate building design refinements over time.

The Master Plan envisions a mix of highrise, midrise and lowrise development. The development of each parcel within the Master Plan is governed by a set of site design criteria and building envelope controls. Site design criteria include pedestrian and vehicle access. The building envelope controls mandate the placement of buildings within the parcels, setting a pattern of development that creates a strong sense of place at the pedestrian level. Two distinct sets of controls, building mass criteria and streetwall criteria, are defined for each parcel. The building envelope controls have been created in a way to allow some design flexibility within each sub-parcel. Also, the Department of Planning and Development may administratively allow minor modifications or adjustments to the building envelope controls.

Maximum Developable F. A. R.

Within Subarea E, a maximum developable area has been established. This maximum developable area will not fill the entire allowable building envelopes, but may be shifted from one parcel to another parcel as long as the maximum building envelopes are maintained.

For the purpose of calculating maximum developable F.A.R. area, only the inhabitable area at or above the building entity shall be included.

Parcel Design Criteria

Pedestrian Access

A well-connected pedestrian network is critical to successfully creating an urban neighborhood in Chicago. The maximum allowable distance between two pedestrian walkways along a single blockface should not exceed the length of a typical downtown Chicago block or approximately 320'. Midblock pedestrian walkways which pass through development parcels are also encouraged.

Vehicular Access

The multi-level plan of Lakeshore East should accommodate the bulk of parking and service below grade. Curb cuts should be kept to a minimum and the use of shared curb cuts along shared property lines is encouraged. Curb cuts should not exceed 20 feet in width. Parking entries should be integrated with the building's architecture through the use of similar materials, patterns, textures and color. All parking above the street level must be screened with occupied space

Service access is permitted at the lower level only.

Emergency Vehicle Access

Required emergency vehicle access easements are identified on the parcel diagrams.

Interim Uses

Undeveloped parcels may support interim uses such as recreational open space, dog friendly areas,

and surface parking interim use plans will be reviewed by the Department of Planning and Development. They should identify all temporary improvements and timeframe of interim use.

Utility Easements

Utility easement corridors, varying in width, and Dedicated and Conveyed to the City of Chicago below approximately +20.92 C.C.D., currently exist throughout the site. As future development fills in the site, the existing utility corridors will generally occur at the lowest level of the parking structure. A service roadway, generally at elevation +6 C.C.D., will typically occur along the easements and intermittent structural columns/caissons for the structures above may fall within the easement corridors. The placing of structural easements within existing easements must be coordinated with existing and future utilities.

These utility easement corridors must be accessible to all utility entities, and will also have controlled accessibility to building service vehicles and to adjacent parking structures.

Existing utilities, will either remain in place, or be relocated into the new, final utility corridors. New utilities will also occur within the new dedicated roadways on grade throughout the site.

Highrise Building Design Criteria

Highrises are characterized by their three elements: the building base, the tower and the top. Transition lines should be articulated at the two or three story level lower base, between the base and tower, and between the tower and top. The transition lines may be achieved by a change of material, a setback, a reveal or a cornice line

Building Base

It is important that the base of the building extend to the sidewalk to define the urban street environment and support a close relationship between activities in each building. Special streetwall standards for the base include:

Setbacks and Building Lines

The building must extend to the defined edge of the sidewalk (specified by property line, easement or setback) for at least 80% of the frontage. The building may setback a maximum of 10 foot for up to 25% of the frontage from the defined edge of sidewalk if the additional setback is designed to include sidewalk cafes, seating, public art, landscaping or other amenities.

Ground Floor Active Building Uses and Transparency

Active uses that are visually connected to the pedestrian environment are encouraged along the ground floor of the building. These active uses may include retail, lobbies or office space. The ground level facade of the building should be transparent to allow viewing into the interior of the building. Blank walls are not encouraged.

Building Envelope

Building mechanical floors may extend beyond the maximum building envelope. Maximum building envelopes are identified for each sub parcel.

Highrise Building Zones

Building Tower

Generally, the preferred location for highrise towers should be toward the primary street frontage.

Building Top

A varied and distinctive skyline is desired. The building top should provide special architectural treatment to express building identity. Vertical design elements, such as spires, should be integrated with the design of the building tower and top. The height of a vertical design element may extend above the maximum building height, and is subject to administrative approval by the Department of Planning and Development.

All rooftop mechanical systems including communication devices should be concealed from view within an architectural enclosure.

Building Separation

To preserve views, a minimum separation of 40' between non-party walls is required. Building projections, such as balconies or bay windows, may not extend into the minimum building separation.

Building Height

Building height is defined as the vertical distance from the curb level opposite the front of the building to the top of the highest occupied floor of the building. For purposes of identifying occupied spaces, the following areas shall be excluded: mechanical rooms, elevator machine rooms & overruns, rooftop deck access rooms, habitable areas comprising less than 20% of the total room area. Maximum heights, identified in total feet, for the building base, tower and top are identified for each parcel.

Townhouses

It is important that the townhouses create a continuous streetwall that frames the park and special pedestrian ways. It is so important that the townhomes along the Park Drive screen all existing and future podiums from view. Special townhouse standards include:

Setbacks and Building Lines

The design of the townhouse podiums shall include a minimum landscape setback of 5' from the sidewalk (specified by property line, easement or setback) East of Field Blvd. South, along the East / West segment of Park Drive, the minimum podium setback may be 3'. Entry stairs may extend into the landscape setback. Townhouses within a particular grouping along the same street frontage should maintain a similar setback from the sidewalk & from their podium.

Orientation

Townhouse entries should be oriented to the street. The townhouses should be designed to include living space at the ground floor to ensure "eyes on the street". Stacked townhouses which have two street frontages should address both streets.

Variety

Variety in the use of materials and articulation is encouraged within groupings of townhouses, in order to create an aesthetically diverse neighborhood setting.

Building Height

Building height is defined as the vertical distance from the curb level opposite the front of the building to the highest point of the townhouse roof. If extending beyond the maximum building height, rooftop areas should be architecturally integrated with the design of the townhouse roof. Maximum heights for the townhouses are identified for each parcel.

PARCEL G1

Property Line

NOTE: These plans are diagrammatic in nature and are only intended to show approximate locations and dimensions.

School Building

The scope of the work for the 45,000 sq. ft. elementary school will include the site work required to prepare the site for construction of the proposed building. The developer shall also provide the "core and shell". It will include all cast in place concrete structural steel, steel joists, and roofing. Additionally, it will include complete exterior enclosures with windows, storefront, glass and glazing, exterior masonry, and exterior doors. Finally, it will include all utilities to a location within the building such as a pump room, or mechanical space. The "core and shell" of the building can be further defined by the following specifications sections from the Chicago Public Schools Project Manual dated 1999 / 2000 (a copy of which is on file at the Department of Planning and Development)

Building Elements

Special consideration will be given to the following building elements during the development review process

Landscape Roofs

Green roofs, or roofs that are covered with planting, can provide great benefits to the building as well as the urban environment and are encouraged. Green roofs may be used to reduce the building's energy costs and also reduce stormwater runoff.

A majority of the defined green roof area should be covered by vegetation. Public access is not mandatory but maintenance access should be maintained. Future installations, such as mechanical equipment, should not have a negative impact on the landscaped area. Drought resistant indigenous plants that require minimal maintenance are recommended.

Arcades

Arcades are allowed, but must be continuous along the entire length of the building frontage from one street right of way to the next street. Minimum width is 8 feet clear, maximum width is 20 feet and minimum clear interior height is 14 feet. Arcades shall have a minimum decorative pavement treatment, and landscaping, seating or other public amenities as appropriate. Arcades shall not contain parking spaces, passenger drop-offs, ramps, loading berths or any other vehicular use, or trash storage facilities.

Through Block Pedestrian Connections

Indoor and outdoor through block pedestrian connections are encouraged.

Enclosed Through Block Connections

The connection should provide a continuous unobstructed corridor of at least 20 feet in width and the unobstructed height must be a minimum of 15 feet. Material finishes and lighting should be selected to ensure a pleasant and safe pedestrian connection.

Exterior Through Block Connections

The connection should be a continuous unobstructed space at least 20 feet in width. A minimum clear height of 20 feet is required where the connection is not open to the sky. Building elevations that border the connection should include active building uses where possible or be treated with plantings, murals and other architectural details.

Balconies

Balconies are permitted but must be integrated within the design of the building facade.

Bay Windows

Bay windows are allowed and may extend above a ground level landscape setback but may not extend into the minimum building separation.

Canopies and Awnings

Canopies and awnings are permitted for retail development and building entries. Canopies and Awnings should be integrated with the design of the facade. Materials should be high quality and may be either fixed or retractable. They must meet all

applicable City Codes and regulations.

Exhausts

Exhaust vents should not be located on a building's primary street frontage.

Signage

Signage is to be kept to an absolute minimum. The design of signs should be compatible with the building and street frontage. High quality and durable materials are encouraged. Signs should be mounted in locations that respect the design of the building, including arrangements of bays and window openings. Fixtures for externally illuminated signs should be simple and unobtrusive.

Signage at building tops is limited to hotel uses and is subject to administrative review and approval of the Department of Planning and Development. Signage must be integrated with the design of the building.

Building Lighting

Lighting may vary within the Lakeshore East Development. Public spaces should be adequately lit to ensure a safe pedestrian environment. Lighting used to highlight architectural features such as articulated building tops or building entrances is encouraged. Such architectural lighting should be planned to not visually impact adjacent buildings or public spaces.

Radio Antennae

Radio antennae may be allowed on Parcels G and D but must be integrated with the design of the building.

Parking

Parking Entrances

Parking garage entrances should be designed as an integrated element of the building's facade through the use of similar materials and detailing. Driveways and curb cuts should be compatible in material and detailing with adjacent sidewalks.

Perimeter Walls

All Parking at or above the upper street level must be screened by occupied space. Parking along the lower and intermediate levels may extend to the parcel line; however the parking must be architecturally screened when it is adjacent to a public accessway, such as intermediate Wacker Drive and Lake Shore Drive. Along Field Blvd. North parking must be screened by occupied space at the lower level, and architecturally screened above the lower level. Along the Park Drive, the townhomes and other residential buildings will screen all existing and future parking podiums from view.

Ventilation

Parking garage ventilation should be well designed, with openings which should incorporate architectural screening. Ventilation structures should be designed as integral components of adjacent buildings or open space.

Building Materials

The selection of appropriate building materials should be made with a concern for the existing context.

All Glass curtain-wall buildings are discouraged and highly reflective glass will not be permitted. If all glass-curtain-walls are used, high quality, low-e or clear glass should be used.

Two grades of building material quality, Grade 1 and Grade 2, have been identified in the Master Plan.

- Grade 1: Natural Stone
- Brick
- Architectural Precast
- Glass and Metal Curtain Walls

Grade 2: Grade 1 Materials preferred

- Exposed Structural Concrete allowed with architectural detailing and
- clean, high quality construction
- formwork (such as steel forms or plastic faced plywood)

Generally, Grade 1 materials should be used for signature buildings at the perimeter of the site and Grade 2 materials may be used for buildings on the interior of the site. Unique materials and colors are encouraged along the ground level, at building entrances and on the rooftops.

In general, whether Grade 1 or Grade 2 materials are used, a high quality level of finishes and details is important.

Building Bases

Grade 1 materials should be used on the building bases and the townhouses. Clear or lightly tinted glass is preferred. Retail storefronts may include ornamental metals

Building Towers

The portion of the building above the base should use materials that are compatible with the material used for the base and also be complementary with neighboring buildings. Towers identified as signature buildings should use Grade 1 materials, however, the level of articulation and detailing may be simplified. Towers identified as Grade 2 may use exposed structural concrete clear or slightly tinted glass is preferred. Ornamental metals may be used for building accents.

Building Top

The materials used for the building tops should be of high quality and present a distinctive image for the building.

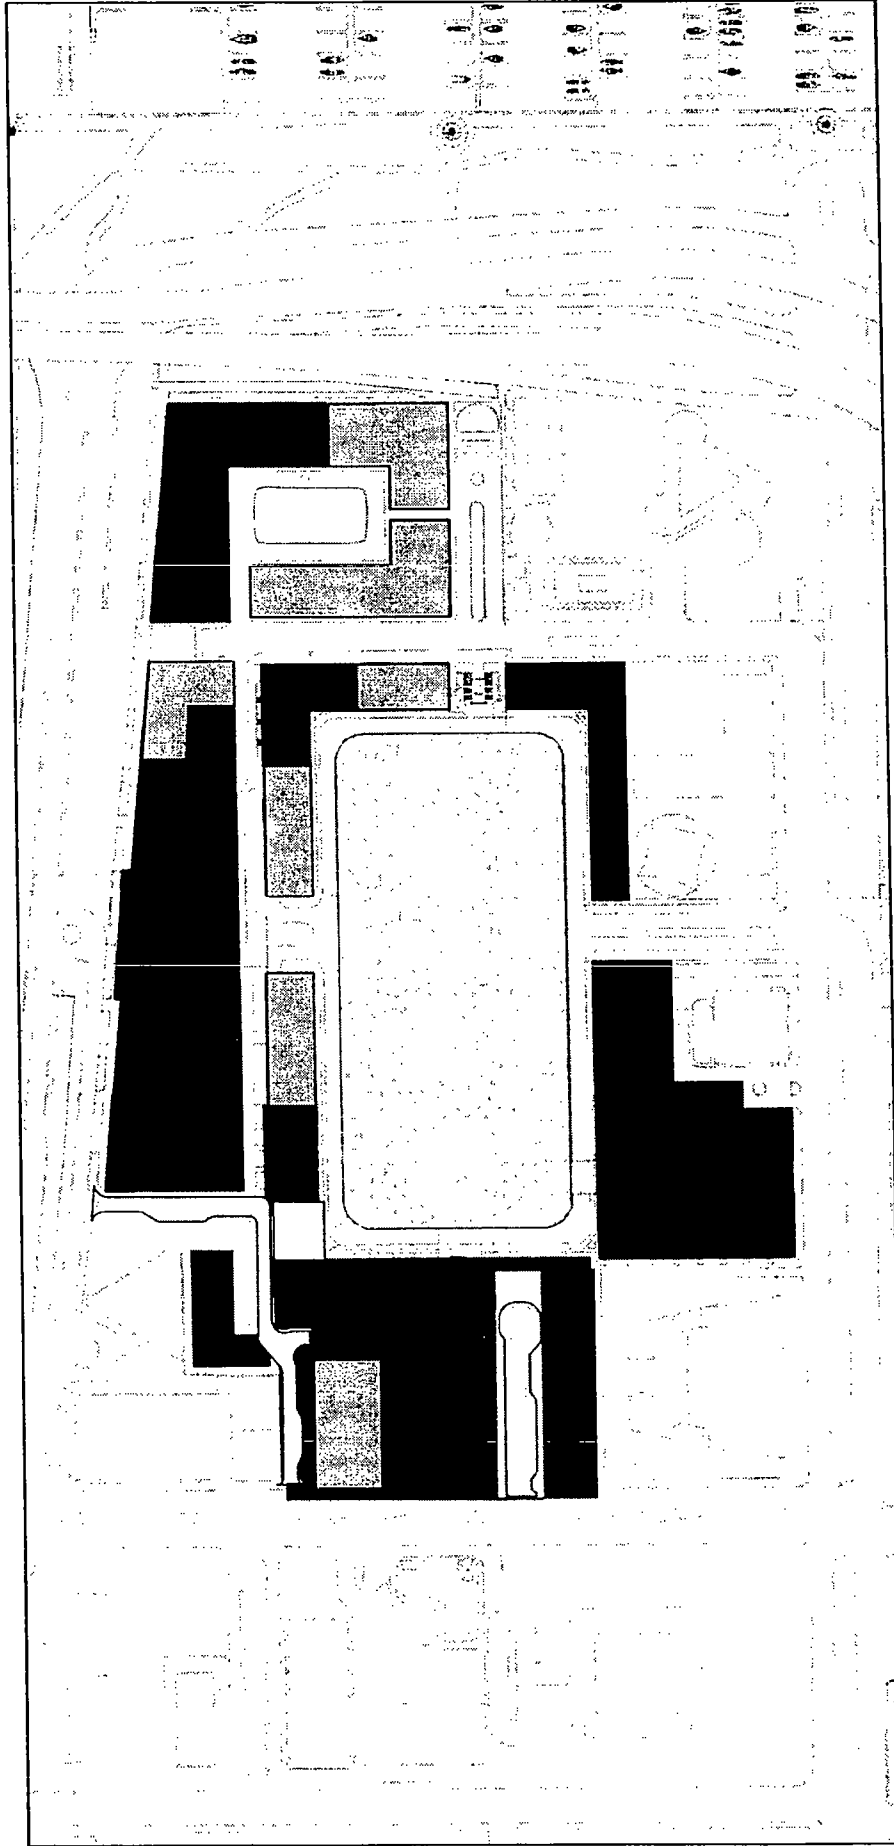

Material Color

Material colors should minimize differences between adjacent parcels. Predominantly dark buildings are discouraged.

Stone, brick and concrete colors should be light to medium warm neutral colors.

Glass colors may include clear panes or slightly tinted gray, silver, green or blue.

Environmentally Conscious Design

The Lake Shore East Development is a significant opportunity to showcase environmentally sensitive design. The following recommendations can be used as a checklist to evaluate and ensure an environmentally sensitive approach to building a neighborhood.

Site Design Recommendations

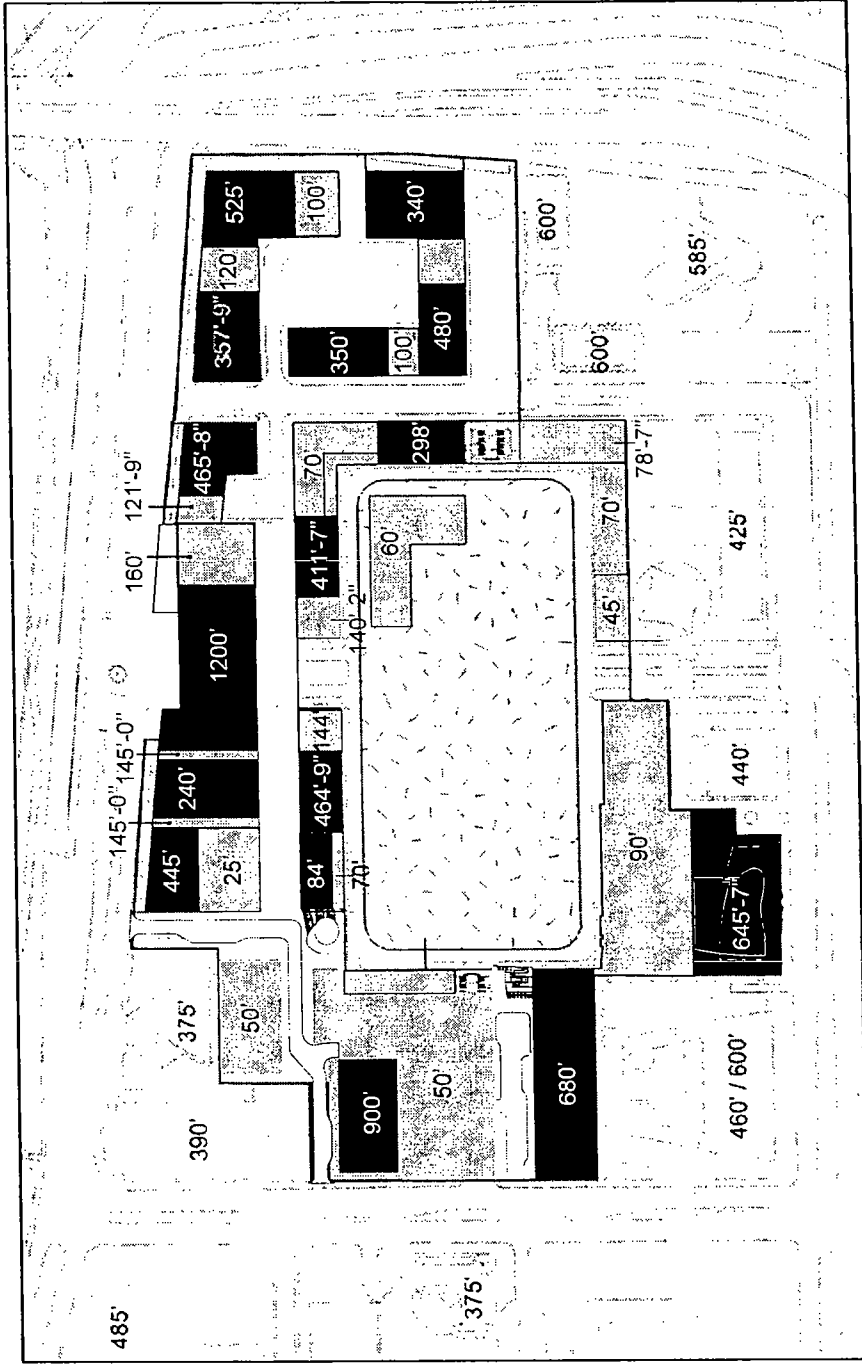

- Orient buildings to optimize solar exposure.
- Buildings near the Lakefront should reduce the amount of curtain wall in an effort to reduce the injury to migratory birds due to the transparent nature of the facade.
- Utilize indigenous landscape materials, with an appropriate diversity in plant species.
- Properly manage stormwater runoff
- Relocate and reuse existing trees.

Building Design Recommendations

- Coordinate programmed areas that will benefit from sun exposures in appropriate zones within the building.
- Manipulate building envelopes that will respond to climate and orientation.
- Consider the integration of photovoltaic panels and/or fuel cells for electric generation.
- Encourage operable windows that provide fresh air to interior workspaces and living spaces.
- Utilize energy efficient building systems.
- Include "landscape roofs."
- Develop exterior and interior shading devices that minimize heat gain.
- Utilize exterior and interior "light shelves" that bring daylight into the interior zones and workspaces of the buildings.
- Minimize the use of hazardous or "off gassing" materials, specifically materials with volatile organic compounds (VOC's).
- Employ wood products harvested from certified forests.
- When possible, select materials based on life-cycling costs.
- Develop lighting controls that manage energy consumption including task lighting, daylighting, an energy efficient artificial lighting.
- Coordinate a tenant recycling program with the City of Chicago's recycling program.

The building spanning Field Blvd North is required to architecturally clad the existing structure of Upper and Intermediate level Wacker Drive within the opening.

Proposed cladding solutions shall be reviewed and approved by the Department of Planning and Development, CDOT, and IDOT.

PROTECTION ORDINANCE APPLICATION NO. 649**

APPLICANT: LAKESHORE EAST, LLC

LOCATION: 381-383 EAST WACKER DRIVE

Pursuant to the provisions of the Chicago Zoning Ordinance, Title 17 of the Municipal Code of Chicago, the Department of Planning and Development ("DPD") hereby submits this report and recommendation regarding a proposed 2015 Amendment to Residential-Business Planned Development #70, as amended, for your review and recommendation to the Chicago City Council. The application for the amendment to the Zoning Ordinance was introduced into the City Council on June 19, 2015.

DPD also submits for your review and approval proposed Lake Michigan and Chicago Lakefront Protection Ordinance Application No. 670 pursuant to Section 16-4-100 of the Lake Michigan and Chicago Lakefront Protection Ordinance. The subject site is located within the Private Use Zone. The lakefront application was filed with DPD June 10, 2015.

Proper legal notice of the public hearing for both the zoning application and lakefront application was published in the Chicago Sun-Times on November 4, 2015. The Applicant was separately notified of this hearing.

The Applicant intends to amend the Lakeshore East Master Plan and Design Standards associated with Subarea E of Residential-Business Planned Development #70 and to construct an approximately 1200' mixed-use building with 410 dwelling units, 210 hotel keys, additional commercial space and accessory parking on an approximately 67,163 square foot site located within Subarea E of Residential-Business Planned Development #70 at approximately 381-383 East Wacker Drive.

BACKGROUND

Residential Business Planned Development #70 was first created in 1969 and includes the area that is generally bounded by North Michigan Avenue, East Randolph Street, North Lake Shore Drive and East Wacker Drive. At that time, the subject area was largely the

terminus of the Illinois Central Railroad yard in downtown Chicago. Today, the area includes several notable buildings and significant redevelopment projects, including Illinois Center, Aon Center as well as Lakeshore East. Moreover, the planned development is notable as part of a larger area that includes a three level road network, resulting in sub-level, middle-level and upper-level Wacker Drive, Randolph Street and Columbus Drive, to name a few. This road network presents challenges and opportunities for redevelopment.

Lakeshore East, essentially Subarea E of PD #70, is approximately 28 acres in size and is generally bounded by North Columbus Drive, East Wacker Drive, North Lake Shore Drive and East Randolph Street. Lakeshore East is largely a residential/mixed use community that was begun by the Applicant in approximately 2001 and today has been substantially redeveloped with a variety of buildings such as Aqua, Regatta and Shoreham, among others, around a new public park. Lakeshore East is governed by the zoning controls in PD #70 which prescribes the overall development volume, number of dwelling units and hotel keys as well as commercial space that are allowed within the planned development and each Subarea. In addition, Subarea E is governed by the Lakeshore East Master Plan and Design Standards (Master Plan).

The proposed 2015 Amendment to PD #70 includes changes to the Master Plan that will accommodate a new residential/mixed use development project named Wanda Vista. The changes include adjustments to the allowed building heights in Lakeshore East as well as infrastructure and parcelization adjustments. Finally, the elevation drawings, site plans and other supporting exhibits prescribing the Wanda Vista project itself are being included in the proposed 2015 Amendment to streamline the site plan approval process.

SITE AND AREA DESCRIPTION

The subject site is officially located within the northeastern most section of the Loop Community Area immediately south of the intersection of North Field Boulevard and East Wacker Drive. East Wacker Drive at this location is improved at the upper, middle and sub levels. North Field Boulevard is currently improved at the sub level but exists as a public right of way at the middle and upper levels as well and essentially splits the subject site into two halves. The difference in height between the upper and sub levels of Field Boulevard and Wacker Drive is approximately 53'. The proposed site is approximately 67,163 square feet as measured at Upper-Level East Wacker Drive which includes the proposed vacation of portions of North Field Boulevard above 22'. The currently vacant site has an address of 381 East Wacker Drive and is referred to as Parcel D within the Master Plan.

As stated, the site is currently zoned Residential-Business Planned Development #70 (Subarea E), which will not change as part of the 2015 Amendment. While several parcels remain undeveloped within PD #70, the area is currently improved with a variety of residential, mixed use and commercial buildings. Immediately to the west, east as well as south of the subject site are residential towers located within Lakeshore East and known as the Regatta, Coast, Tides and Shoreham. Nearby uses include a grocery store, the Aqua residential/hotel tower, various townhomes and GEMS school. In addition to the multi-level street and pedestrian connections in the area, the defining feature of Lakeshore East is

Lakeshore East Park, a 5.3 acre Chicago Park District facility located in the center of the development, which provides walking paths, open space and a dog park, among other amenities. To the north of the subject site, located within the right of way of Sub-Level East Wacker Drive is a City of Chicago Auto Pound facility. Further north of Wacker Drive is the Chicago River Walk which is improved with a variety of seasonal uses such as kayaking, restaurants and tourism-related uses.

For broader context, the area to the north of Lakeshore East, across the Chicago River is currently zoned a variety of downtown zoning districts and planned developments that include residential, mixed use and commercial buildings. Uses in this area, which is part of the larger Streeterville area, include City Front Center and the Sheraton Hotel, among others.

The subject site is well served by existing public transit resources. In addition to many nearby bus routes, the Chicago Transit Authority's (CTA) Jackson Park Express bus (#6) is available on East Wacker Drive as well as the Blue Island/26th Street bus (#60) on North Harbor Drive, very close to the proposed Wanda Vista Tower. In addition, the subject site is well served by existing bike infrastructure and will be very well served by the Chicago Pedway System, providing a covered link from the site into the core of the Central Business District.

As stated, the site is located within the Private Use Zone of the Lake Michigan and Chicago Lakefront Protection District. It is not a Chicago Landmark nor is it located within a Chicago Landmark District. The property is also not located within a Tax Increment Financing District.

PROJECT DESCRIPTION

The Wanda Vista project consists of the construction of an approximately 98-story mixed use building (93 stories above Upper Wacker Drive) that will include approximately 410 dwelling units, 210 hotel keys, 247 accessory parking spaces and additional commercial space. The entire building is planned to include approximately 1,600,000 square feet of space. The project also includes significant infrastructure improvements and changes to the immediate area to support the proposed development project including the vacation and dedication of portions of Field Boulevard rights of way. Construction is anticipated to commence in the Spring of 2016 and be completed in 2019 and 2020.

DESIGN

The design of the building includes a five-story base that will be constructed below the level of Upper Wacker Drive and will largely include parking, mechanicals and other building support services. North Field Boulevard will continue to operate as a publicly dedicated street through the center of the building at the lowest level (lower level five), connecting East South Water Street, within the Lakeshore East area, to Sub-Level East Wacker Drive. Above this lowest level, Field Boulevard will be vacated, allowing lower levels four thru one of the proposed building to be built across the entire building site.

Above this five-story base, the building can best be described as four interconnected towers that increase in height from east to west across the site, creating smaller floor plates as height increases with the building. The first tower tops out at approximately eleven stories above Upper-Level East Wacker Drive. The second, third and fourth towers are designed to be approximately 47 stories, 71 stories and 93 stories above Upper-Level East Wacker Drive, respectively. The lower levels of the building (Floors 1-11) will primarily house the hotel functions while the upper floors (Floors 12-93) will primarily house the dwelling units. The tallest portion of the building, on the west side of the site, is planned to be approximately 1200'.

The overall design for the portion of the building above Upper-Level East Wacker Drive is a series of frustums, stacked on each other in an inverted manner that also alternate between the towers. The cladding of the building on all sides includes various types of glazing and stainless steel. A portion of the north façade up to the eleventh floor will extend out from the base, giving the building a prominent entry focal point and multi-level interior space. This portion of the building will be clad with a brushed stainless steel and glass. Balconies are designed into the floor plates for the residential floors, affording many of the units private outdoor amenity space. Additional common outdoor spaces will be provided at various other levels of the building for hotel guests, restaurant patrons and residents, as appropriate. The material callouts on the exhibits to this report detail all of the specific planned materials that make up the building's design.

LANDSCAPING

The project will fully comply with the Chicago Landscape Ordinance along the proposed and existing public and private rights of way as well as the proposed outdoor pedestrian promenades. Significant landscaping is proposed for the easternmost end of the proposed extension to Upper Level East Wacker Drive as well as the pedestrian overlook to Lakeshore East Park at Waterside Drive.

ACCESS/CIRCULATION

The primary vehicular access to the building is planned via the proposed Upper-Level Field Boulevard, which will connect to an extended Upper-Level East Wacker Drive as well as to Waterside Drive. This upper level includes a dropoff area as well as bypass area for hotel patrons and residents. The residential dropoff will be located on the easternmost side of the site via Upper-Level Field Boulevard. The hotel dropoff area will be constructed on an extended Upper-Level East Wacker Drive, which will also function as a landscaped pedestrian area.

Also at the upper level, access to the garage below is available on the west side of the site while an exit from the garage is planned for the east side of the site. In addition, vehicular access to the building garage is planned via Sub-Level East Wacker Drive, including space for six loading berths. The garage will contain space for approximately 247 vehicles (located on lower levels five thru one) while additional garage parking is planned for a future building project on the site immediately west of the proposed Wand Vista Tower, via

an interconnected garage.

Pedestrian access points to the building include via Sub-Level Field Boulevard as well as Upper-Level Field Boulevard and Upper-Level East Wacker Drive. A public access point and elevator to allow pedestrians access to Sub-Level Field Boulevard, Upper-Level Field Boulevard as well as the Pedway system, at approximately the level of Middle-Level Field Boulevard, will be installed completely within the Wanda Vista building. In addition, planned pedestrian improvements on the site include a promenade connection between the north side of the Wanda Vista building and the extended Upper-Level East Wacker Drive, a pedestrian overlook to Lakeshore East Park at Waterside Drive as well as Sub-Level Field Boulevard improvements, especially at the intersection of Sub-Level East Wacker Drive.

The right of way adjustments necessary to accommodate the proposed Wanda Vista project include: 1) Vacation of the air rights at 22' above a portion of Sub-Level Field Boulevard; 2) Vacation of additional portions of Field Boulevard completely; 3) Dedication of portions of private property to widen Sub-Level Field Boulevard; 4) Extension of Upper-Level East Wacker Drive, and; 5) Establishment of easements for the public use of Upper Field Boulevard and connections to Waterside Drive and Upper East Wacker Drive.

SUSTAINABILITY

The Applicant will provide approximately 11,000 square feet of green roof and will achieve LEED Silver certification for the Wanda Vista project. The project will also comply with the Storm Water Management Ordinance, implementing best practices in all storm water management. The Green Roof Plan included as an exhibit to this report highlights the locations of the green roofs on the various levels of the building.

BULK/USE/DENSITY

PD #70 contains an overall cap on Floor Area Ratio (FAR) volumes, allowed dwelling units, allowed hotel keys and allowed office/retail space throughout the entire PD and by Subarea. Subarea E limits total development to approximately 9,700,000 square feet of space, 4900 dwelling units and 2100 hotel keys. The effective FAR for Subarea E is 11.6.

No changes to the development limits prescribed within PD #70 as outlined above are necessary to accommodate the proposed Wanda Vista project. The Wanda Vista project will contain approximately 1,600,000 square feet of total space and as stated earlier, 410 dwelling units and 210 hotel keys. After the Wanda Vista project is completed, approximately 2,690,000 square feet of space will remain for future development projects within Subarea E of PD #70.

As stated, this proposed 2015 Amendment to PD #70 seeks to amend the Master Plan associated with Subarea E. Specifically, the Master Plan is being adjusted to increase the maximum height allowed for the parcel proposed to be redeveloped for the Wanda Tower

project (Parcel D) from 640' to 1200'. The maximum building height allowed for Parcel O, located immediately to the south of the Aqua Building on North Columbus Drive, is proposed to be decreased from 900' to 680'. Other changes to the Master Plan include changes to the parcelization plan and infrastructure adjustments necessary to accommodate the Wanda Vista project.

RECOMMENDATION

The Department of Planning and Development has reviewed the proposed Amendment to PD #70 and the materials submitted by the Applicant and compared this proposal to existing development in the community. The area around this project is part of a larger planned development with similar zoning controls while nearby downtown zoning districts are also similar and the proposal represents an opportunity to construct a compatible residential/mixed use development project along East Wacker Drive in Chicago's Loop Community Area.

Based on that analysis, the Department of Planning and Development has concluded that this proposal is appropriate for this site and supports this development for the following reasons:

1. The project meets the purpose and criteria set forth in Chapter 17-8 of the Zoning Ordinance and its adoption would not have any adverse impact on the public's health, safety or welfare. Specifically, this project meets the following provisions of Chapter 17-8:
 - a. Promotes pedestrian interest, safety and comfort by creating safe and attractive walkways and pedestrian routes and by emphasizing building entries through architecture and design (per 17-8-0905-A), as evidenced by the project's incorporation of improved pedestrian paths and the significant building entrance;
 - b. Upper-story setbacks should be used to reduce the apparent mass and bulk of tall buildings (per 17-8-0907-B) as evidenced by the proposal's incorporation of significant setbacks in the overall building's design;
 - c. Reinforces desirable urban features found within the surrounding area, such as siting patterns, massing arrangements and streetscape characteristics (per 17-8-0906-A), as evidenced by the compatibility of the project's mass and site design with the surrounding buildings in the Lakeshore East area and more broadly, in the Loop community area;
 - d. Provides adequate, inviting, usable and accessible open space for workers, visitors and residents, provides a sense of place associated with the development and provides substantial landscaping of the open areas (per 17-8-0909-A), as evidenced by the incorporation of a pedestrian promenades overlooking Lake Shore East Park and East Wacker Drive;
 - e. Conserves non-renewable energy and scarce materials (per 17-8-0908-A) as evidenced by the project's goal of LEED Silver certification;

- f. Promotes the safe and efficient circulation of pedestrians, cyclists and motor vehicles (per 17-8-0904-A1) as evidenced by the project's site plan that provides appropriate drop-off, bypass and through connections between the site and surrounding Lakeshore East area, including an enclosed publically accessible connection to the lower level, upper level and Pedway level of the project; and
 - g. All sides and areas of the buildings that are visible to the public are treated with materials, finishes and architectural details that are of high-quality and appropriate for use on primary street-facing façade (17-8-0907-A-4), as evidenced through the material callouts in this report and on the elevations.
2. The site lies within the boundaries of the Central Area Action Plan, which was adopted by the Chicago Plan Commission on August 20, 2009. The project is completely consistent with the Central Loop Sub-district of the Central Area Action Plan which supports the residential development of Lakeshore East.
 3. The public infrastructure facilities and city services will be adequate to serve the proposed development at the time of occupancy. The proposed project has been reviewed by the Mayor's Office for People with Disabilities and the Department of Transportation and all requested changes have been made. Copies of this application have been circulated to other City departments and agencies and no comments have been received which have not been addressed in the application.
 4. The project will comply with the requirements for access in case of fire and other emergencies.

Based on the foregoing, it is the recommendation of the Department of Planning and Development that this application for a Residential Business Planned Development be approved and that the recommendation to the City Council Committee on Zoning, Landmarks and Building Standards be "Passage Recommended".

The Department of Planning and Development has reviewed the project materials submitted by the Applicant with regards to the Policies and Purposes of the Lake Michigan and Chicago Lakefront Protection Ordinance and has concluded that the proposed development would be in compliance with the applicable Policies of the Lakefront Plan of Chicago and the Purposes of the Lake Michigan and Chicago Lakefront Protection Ordinance, as they apply to development in the Private Use Zone, specifically:

1. Policy No. 10 (Ensure a harmonious relationship between lakeshore parks and community edges but in no instance allow private development east of Lake Shore Drive): The proposal consists of an appropriate residential infill project that will reinforce the multi-unit residential district that exists in this area of the City and minimally impact the lakefront park system.
2. Policy No. 8 (Increase personal safety): The proposal will improve personal safety by providing an improved link under East Wacker Drive for pedestrians accessing the Chicago River Front and will provide improved vehicular and pedestrian safety

- by connecting Upper Wacker Drive, North Field Boulevard and Waterside Drive;
and,
3. Policy No. 14 (Coordinate all public and private development within the water, park and community zones): This site is located within the Private-Use Zone and the development has been coordinated with the appropriate City departments and community to minimize the impact of construction and to ensure it remains in context with the surrounding neighborhood.

With respect to the Policies not enumerated here, the Department of Planning and Development has determined that they are either not applicable to development in the Private Use Zone or that the proposed project will not have a detrimental effect on the Lake Michigan shoreline or any wildlife habitats therein. This is because the proposed project is separated from the shoreline, does not reduce existing open space or wildlife habitat and does not interfere with existing access to, or use of, the lake and its parks.

Based on the foregoing, it is the recommendation of the Department of Planning and Development that this development application, being in conformance with the provisions of the Lake Michigan and Chicago Lakefront Protection Ordinance, be approved, subject to compliance with the Site and Landscape Plans and Building documents dated November 20, 2014 and presented before you today.

A. The certifications, disclosures, and acknowledgments contained in this EDS will become part of any contract or other agreement between the Applicant and the City in connection with the Matter, whether procurement, City assistance, or other City action, and are material inducements to the City's execution of any contract or taking other action with respect to the Matter. The Disclosing Party understands that it must comply with all statutes, ordinances, and regulations on which this EDS is based.

B. The City's Governmental Ethics and Campaign Financing Ordinances, Chapters 2-156 and 2-164 of the Municipal Code, impose certain duties and obligations on persons or entities seeking City contracts, work, business, or transactions. Remedies at law for a false statement of material fact may include incarceration and an award to the City of treble damages.

D. It is the City's policy to make this document available to the public on its Internet site and/or upon request. Some or all of the information provided on this EDS and any attachments to this EDS may be made available to the public on the Internet, in response to a Freedom of Information Act request, or otherwise.
