Assume 10% void ratio in topsoil. (ie: for 6" topsoil, 0.6" * SF = Volume (CF) of water stored.)

Narrative:

The Applicant acknowledges that it is in the public interest to design, construct, renovate and maintain all buildings in a manner that provides healthier indoor environments, reduces operating costs and conserves energy and natural resources. To this end, this building is being designed to achieve LEED certification.

Further, the Applicant commits to providing at-grade open green space in conformance with the Sustainability Matrix Exhibit, in lieu of Green Roof. The open green space provides a net reduction in impervious area of 32% (39,385 SF newly pervious vegetated surface (turf field and native plantings)) which exceeds the 15% (18,423 SF) improvement required by the Stormwater Ordinance. This improvement results in an improvement over Stormwater Ordinance requirements of 17% or 21,079 SF. The comparison of this area with the stormwater retention of green roof area that would have been required for this project is noted above.
